San Tin Technopole Phase I Development (2025 – 2031) – Design and Construction

Environmental Certification Sheet for Environmental Permit No. EP-640/2024

Reference Document~~/Plan~~

Document~~/Plan~~ to be Certified:	Baseline Noise Monitoring Report
Date:	23 October 2025

Reference EP Condition

Environmental Permit Condition:	Condition 3.3

The Permit Holder shall submit 1 hard copy and 1 electronic copy of Baseline Monitoring Reports to the Director at least 2 weeks before the commencement of construction of corresponding parts of the Project. The submissions shall be certified by the ET Leader and verified by the IEC as having complied with the requirements as set out in the EM&A Manual before submission to the Director. Additional copies of the Baseline Monitoring Reports shall be provided upon request by the Director.

ET Certification

I hereby certify that the above referenced document~~/plan~~ complies with the above referenced condition of EP-640/2024.

Agreement No. CE 1/2025 (EP) Independent Environmental Checker for Environmental Monitoring and Audit Works for San Tin Technopole Phase 1 Development (2025 - 2031) – Investigation

Verification of Baseline Noise Monitoring Report under EP-640/2024

24 October 2025

Dear Sir,

We refer to the Baseline Noise Monitoring Report that was provided by the Environmental Team via email on 23 October 2025 and certified by the Environmental Team Leader appointed under Condition 2.1 of the Environmental Permit No. EP-640/2024.

We would like to inform you that we have no adverse comment on the captioned submission. Therefore, we hereby verify the abovementioned submission in accordance with EP Condition 3.3.

Should you have any queries or require any further information, please contact the undersigned at 2828 5967.

Yours faithfully
for MOTT MACDONALD HONG KONG LIMITED

EXECUTIVE SUMMARY

This Baseline Noise Monitoring Report presents the latest noise monitoring works conducted to establish the baseline levels of noise for reference and in accordance with Condition 3.3 of EP-640/2024 and EP-641/2024 and section 16.3 of the Environmental Monitoring and Audit (EM&A) Manual of the Project.

Baseline noise monitoring has been conducted at four (4) monitoring stations within 300m of the works contract ND/2024/09, including CM1, CM3, CM4, CM25, for at least 2 weeks from 21 June 2025 to 5 July 2025 (baseline noise monitoring for CM1 was extended to 7 July 2025). Baseline noise monitoring was then conducted at three (3) monitoring stations within 300m of the works contract ND/2024/10, including CM9, CM10 and CM11, for at least 2 weeks from 9 July 2025 to 26 July 2025 (baseline noise monitoring suspended on 19 July 2025 and resumed on 22 July 2025, and thus extended to 26 July 2025). The major background noise sources identified at the monitoring stations are the nearby road traffic and insects. There were no construction activities identified in the vicinity of the monitoring stations. The baseline monitoring results are considered representative of the ambient noise level. Baseline noise monitoring at other proposed noise monitoring locations mentioned in the EM&A Manual will be reviewed and conducted at later stage, subject to the construction programme of other works contracts.

1. INTRODUCTION

1.1 BACKGROUND

San Tin Technopole as an expansion of the San Tin/Lok Ma Chau Development Node (STLMC DN), is proposed to increase the land supply for innovation & technology (I&T) development so as to achieve the industry clustering effect with economy of scale. Works for the development of San Tin Technopole are planned to be implemented in two phases. San Tin Technopole Phase 1 Development (hereinafter referred to as "the Project") mainly covers the I&T land parcels to the north of San Tin Highway/Fanling Highway, some residential land to the south and the key infrastructure areas with road connections. San Tin Technopole Phase 2 development covers the remaining area.

The Environmental Impact Assessment (EIA) Report for the STLMC DN (Register No. AEIAR-261/2024)[1] was approved with condition on 17 May 2024 under EIAO. Following the approval of the EIA Report, the Environmental Permits (EPs) EP-640/2024 and EP-641/2024 were issued on 28 May 2025, while EP-664/2025, EP-665/2025 and EP-666/2025 were issued on 8 July 2025.

The Project will be delivered under twelve (12) works contracts. The general layout plan of the works contracts is shown in **Figure 1.1**. At the time of this report, baseline noise monitoring has been conducted at seven (7) monitoring stations within 300m of the works contract ND/2024/09 and ND/2024/10, including CM1, CM3, CM4, CM9, CM10, CM11, CM25. Baseline noise monitoring at other proposed noise monitoring locations mentioned in the EM&A Manual will be reviewed and conducted at later stage, subject to the construction programme of other works contracts.

1.2 PROJECT DESCRIPTION

The scope of works under the Project comprises the following:

(a) site formation of land for innovation and technology development, housing, community, commercial and other developments;

(b) engineering infrastructure works including but not limited to roadworks, drainage, sewerage, waterworks, pumping stations, fresh water and flushing water service reservoirs, Common Utility Tunnel ("CUT") and other associated buildings / structures / E&M systems for the Project;

(c) landscaping works; and

(d) implementation of environmental monitoring and mitigation measures works mentioned in (a) to (c) above.

1.3 PURPOSE OF THE REPORT

The purpose of this Baseline Noise Monitoring Report is to present the baseline noise levels recorded at designated environmental monitoring locations near the Project area, prior to the commencement of construction works. This report is prepared in accordance with Condition

[1] AECOM (2024a). EIA Report for First Phase Development of the New Territories North – San Tin / Lok Ma Chau Development Node – investigation. Deposited to EPD under Register No. AEIAR-261/2024

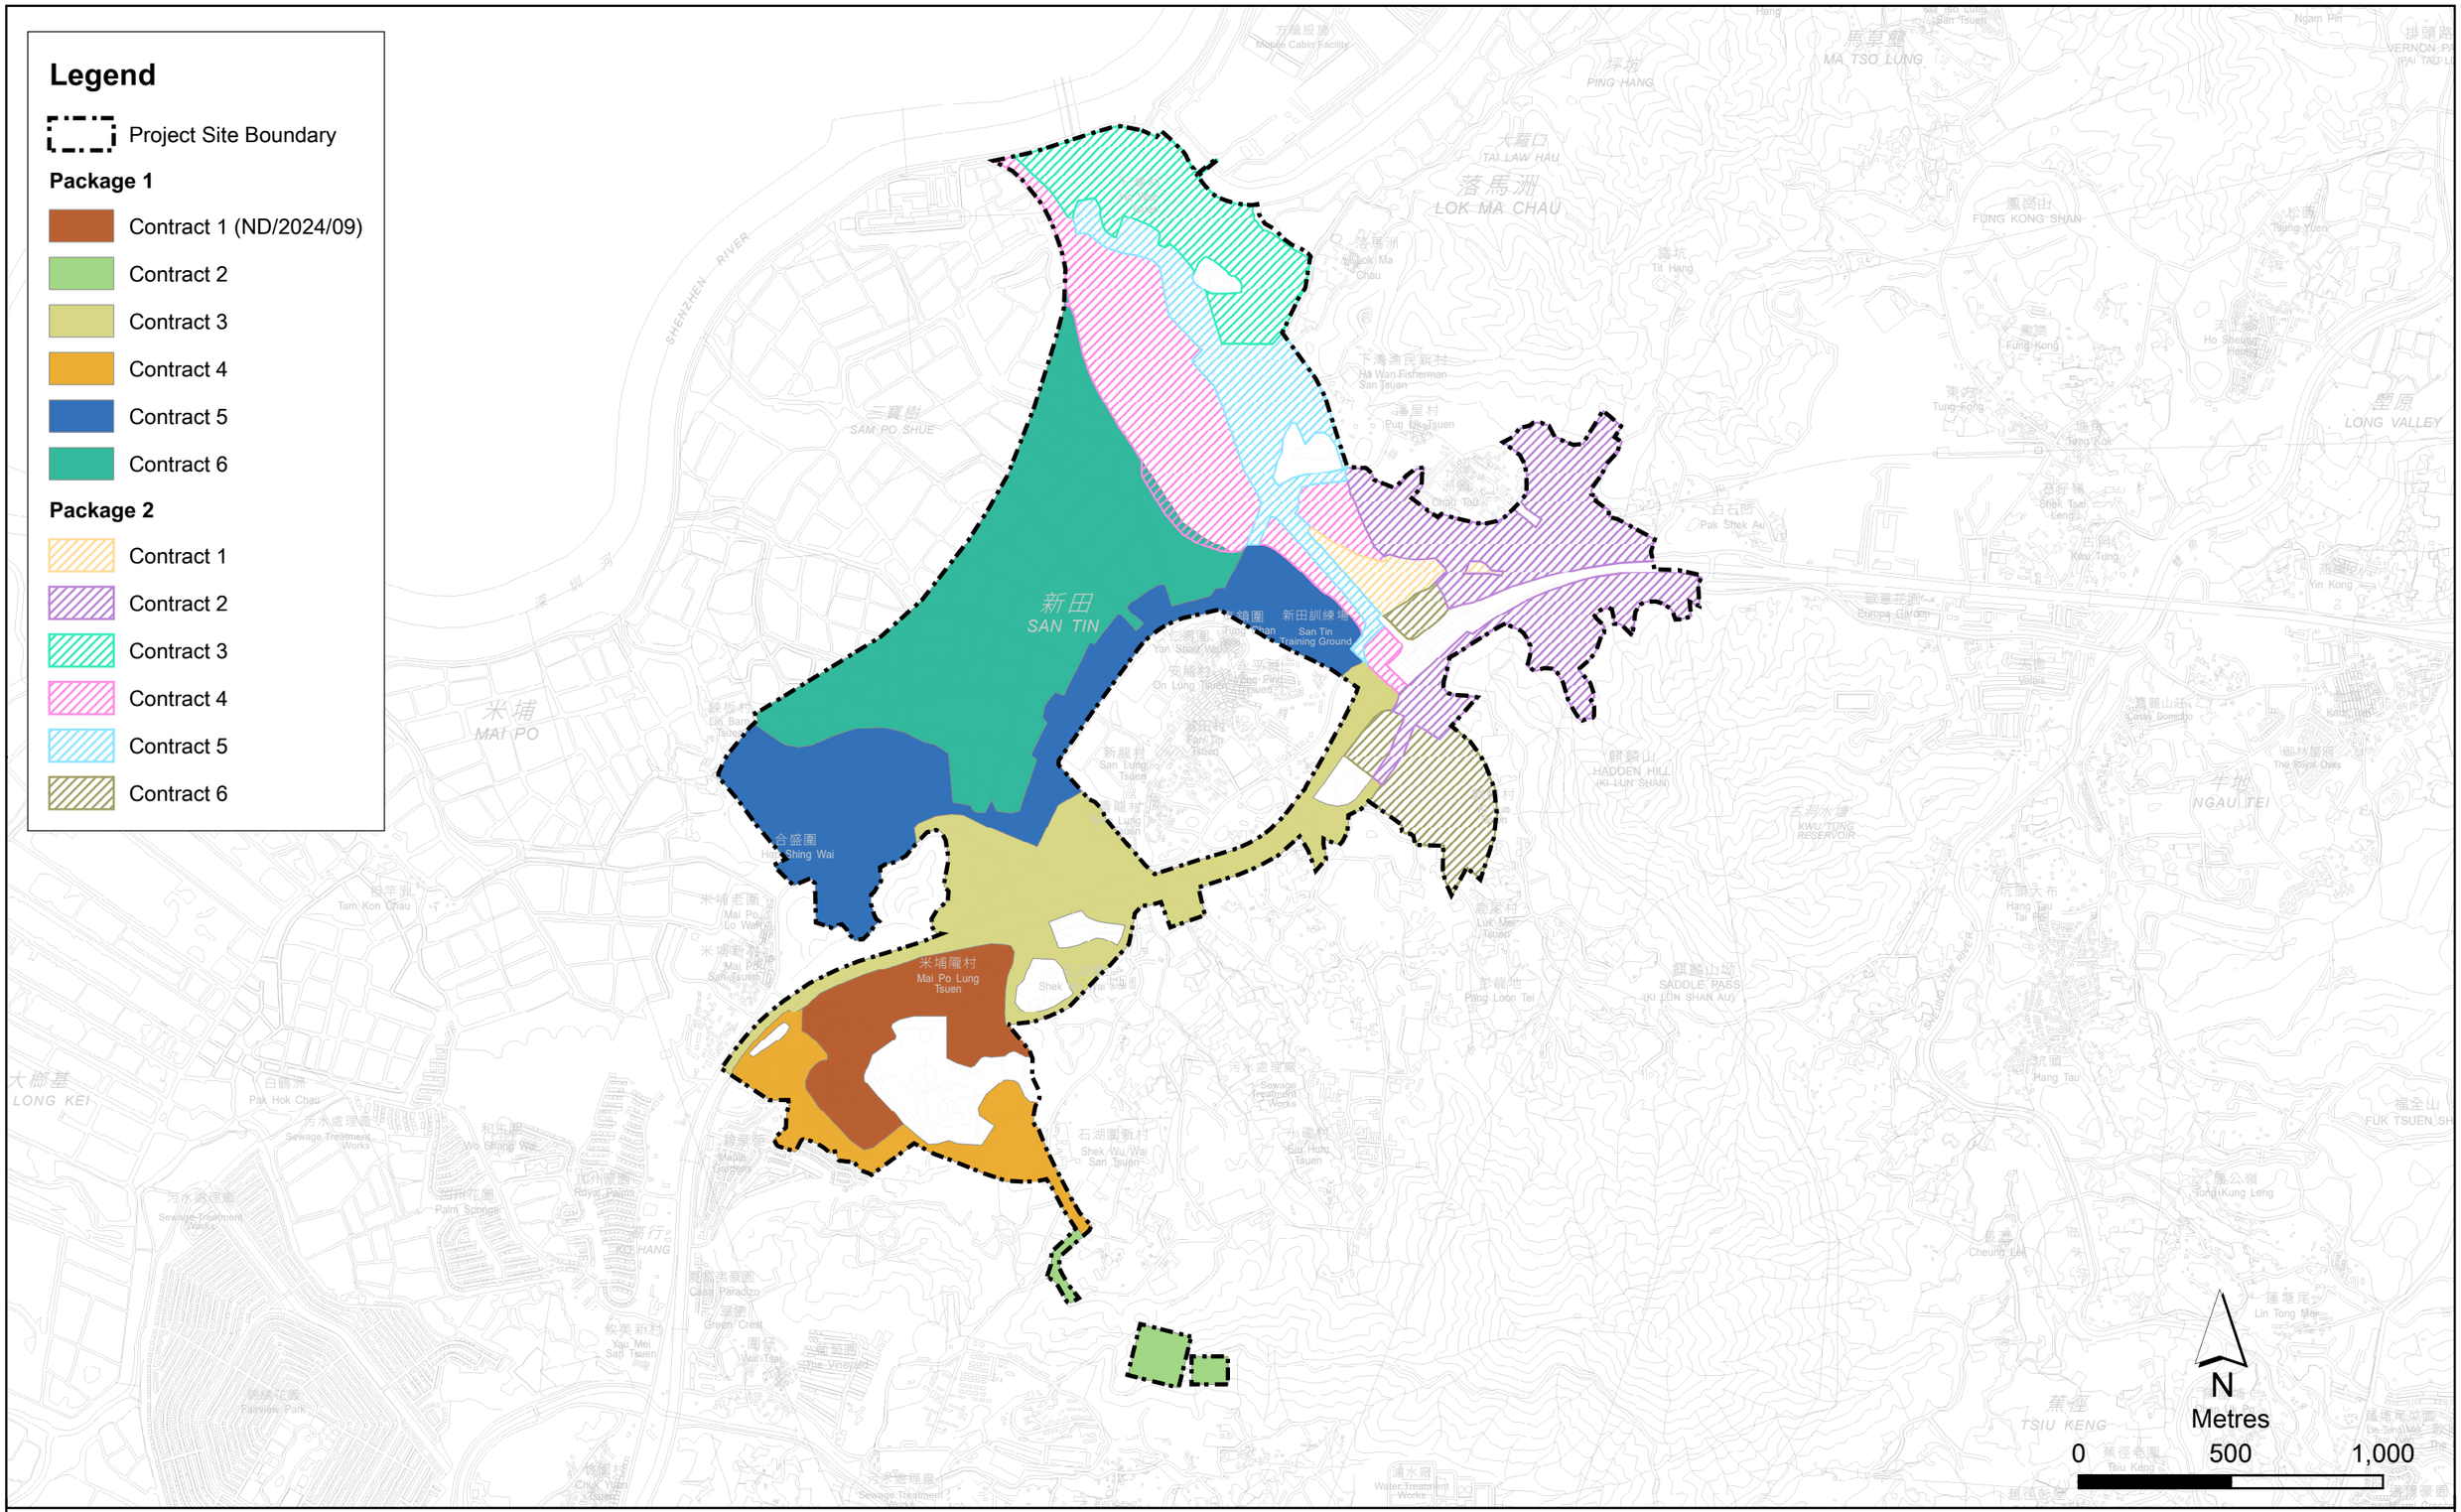

Figure 1.1

General Layout Plan of Works Contracts of the Project

Date: 17/7/2025

3.3 of EP-640/2024 and EP-641/2024 and Section 16.3 of the EM&A Manual for the Project. Such baseline conditions will be used as the basis for assessing environmental impacts, if any, and compliance monitoring during the construction works of the Project.

At the time of this report, the construction work for works contract ND/2024/09 (Package 1 Contract 1) and ND/2024/10 (Package 2 Contract 1) are expected to commence in September 2025. The latest construction programme of these contracts can be referred to **Appendix A**. Prior to construction commencement, baseline noise monitoring were conducted at the proposed noise monitoring stations within the 300m study area of ND/2024/09 and ND/2024/10. Details of the location of the monitoring stations and the monitoring schedule are provided in **Figure 2.1** and **Appendix B** respectively.

This report summarizes the monitoring schedule, locations, equipment used, methodology, and results, along with observations, and establishes the action and limit levels to be adopted for subsequent impact monitoring during the construction stage.

1.4 STRUCTURE OF THE REPORT

The structure of the report is as follows:

- Section 1 provides the project background and purpose of this report.
- Section 2 details the monitoring requirements specified in the Updated EM&A Manual, including monitoring locations and methodology.
- Section 3 presents the results and findings of the baseline noise monitoring.
- Section 4 determines the Action and Limit Levels based on the monitoring results.
- Section 5 stipulates the Event and Action Plan for the Project.
- Section 6 presents the conclusion.

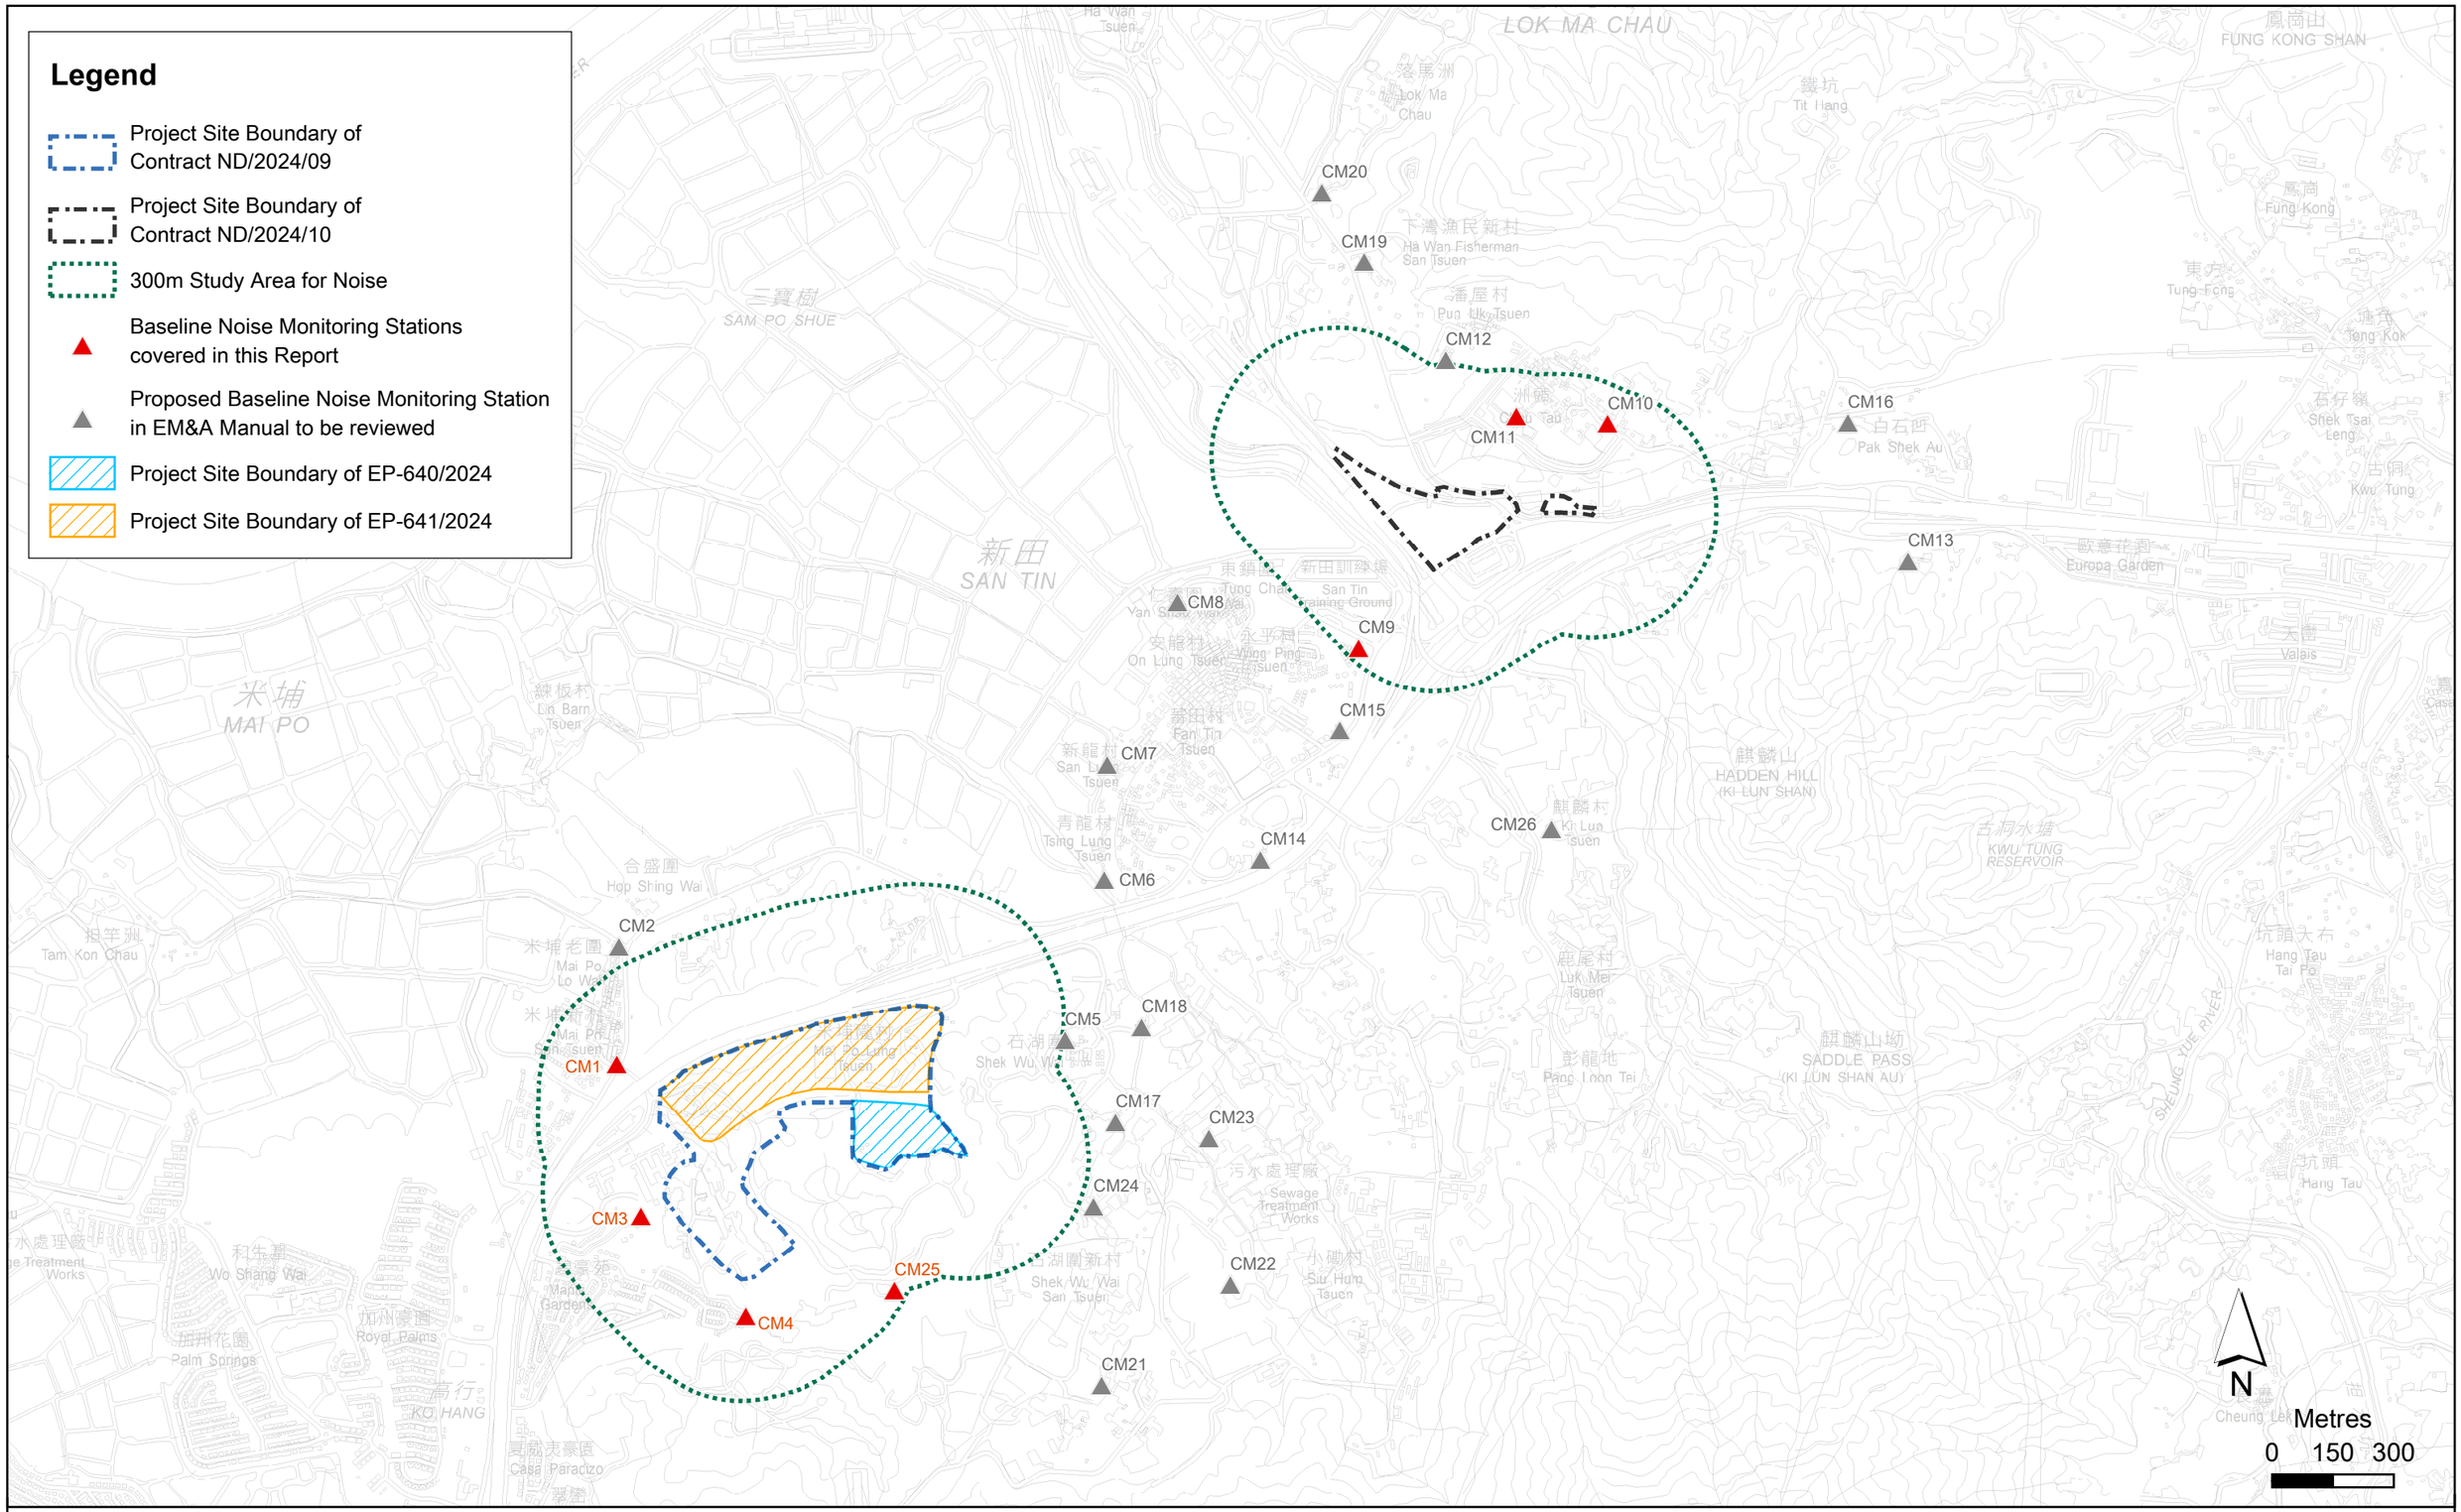

Figure 2.1

Baseline Noise Monitoring Stations

File: T:\GIS\CONTRACT\0785165\mxd\0785165_ND_2024_9_10_NMS.mxd
Date: 6/8/2025

2. MONITORING REQUIREMENT

According to the requirements in the EM&A Manual of the Project, baseline noise monitoring shall be carried out at the monitoring locations for a period of at least two weeks in a sample period interval of 5 minutes or 30 minutes between 0700 and 1900, and 5 minutes between 1900 and 0700 prior to the commencement of the construction works. The noise levels shall be measured in terms of the 30-minute A-weighed equivalent continuous sound pressure level ($L_{eq\ (30\text{-}min)}$). During the baseline noise monitoring, there shall not be any construction activities in the vicinity of the monitoring stations. Details of the baseline noise monitoring are presented in the following sections.

2.1 MONITORING LOCATIONS

With reference to the EM&A Manual and as shown in **Figure 2.1**, a total of seven noise monitoring stations are identified within 300m of ND/2024/09 and ND/2024/10. Four noise monitoring stations are identified within 300m of ND/2024/09, including CM1, CM3, CM4 and CM25. Three noise monitoring stations are identified within 300m of ND/2024/10, including CM9, CM10, CM11. A description of these monitoring stations is presented in **Table 2.1 and Table 2.2**.

TABLE 2.1 DESCRIPTION OF BASELINE NOISE MONITORING STATIONS FOR ND/2024/09

Monitoring Station	Location	Type of measurement
CM1	69 Mai Po San Tsuen	Free Field
CM3	Scenic Heights Block B2	Free Field
CM4	30 Rolling Hills Phase II	At Façade
CM25	Proposed Residential Development at RSc.1.2.2	Free Field

TABLE 2.2 DESCRIPTION OF BASELINE NOISE MONITORING STATION FOR ND/2024/10

Monitoring Station	Location	Type of measurement
CM9	285B Wing Ping Tsuen	Free Field
CM10	291 Chau Tau Tsuen	Free Field
CM11	218 Chau Tau Tsuen	Free Field

2.2 MONITORING PARAMETERS, FREQUENCY AND DURATION

Table 2.3 summarizes the monitoring parameters, frequency and duration of noise monitoring. Baseline noise monitoring was conducted for 2 weeks. The baseline noise monitoring schedule is provided in **Appendix B**.

TABLE 2.3 NOISE MONITORING PARAMETERS, PERIOD AND FREQUENCY

Time Period	Parameters	Duration, min	Time Period
Daytime on normal weekdays (0700-1900 hrs)	L_{eq}, L_{10} and L_{90}	30 mins	For 2 weeks
Evening and Nighttime on all days (1900-0700 hrs) and daytime during public holidays (including Sundays) (0700-1900 hrs)	L_{eq}, L_{10} and L_{90}	5 mins	For 2 weeks

2.3 MONITORING EQUIPMENT

Integrating Sound Level Meter was used for noise monitoring. The meter is a Type 1 sound level meter capable of giving a continuous readout of the noise level readings including equivalent continuous sound pressure level (L_{eq}) and percentile sound pressure level (L_x). The meter used also complied with International Electrotechnical Commission Publications 651:1979 (Type 1) and 804:1985 (Type 1) specifications. **Table 2.4** summarised the noise monitoring equipment model used. Copies of the calibration certificates for the sound level meters and calibrator are presented in **Appendix C**.

TABLE 2.4 NOISE MONITORING EQUIPMENT

Equipment	Monitoring Station	Model
Integrating Sound Level Meter	CM1	Rion NL-53 (S/N: 00452007)
	CM3, CM10	Rion NL-53 (S/N: 01141566)
	CM4, CM9	Rion NL-53 (S/N: 00452006)
	CM25, CM11	Rion NL-53 (S/N: 01141565)
Calibrator	All stations	CAL200 (S/N: 16878)

2.4 MONITORING METHODOLOGY

The monitoring procedures are as follows:

- Façade and Free Field measurements were made at the monitoring locations.
- The sound level meter was set at least 1.2 m above ground for free-field measurements. A correction of +3 dB(A) has been made for the free field measurements.
- When façade measurement were conducted, the microphone was positioned 1 m away from the façade.
- The battery condition was checked to ensure the correct functioning of the meter.
- Parameters such as frequency weighting, time weighting and measurement time were set as follows:

  - frequency weighting: A
  - time weighting: Fast
  - measurement time: 5 minutes ($L_{eq\ (30\text{-}min)}$ would be determined for daytime noise by calculating the logarithmic average of six $L_{eq\ (5min)}$ data)

- Prior to and after noise measurement, the meter was calibrated using the calibrator for 94.0 dB at 1 kHz. If the difference in the calibration level before and after measurement was more than 1.0 dB, the measurement would be considered invalid and repeat of noise measurement was required after re-calibration or repair of the equipment.
- Noise monitoring was carried out continuously for 24 hours during the 2-week baseline monitoring period. Monitoring data were recorded and stored automatically within the sound level meter system. At the end of the monitoring period, noise levels in terms of L_{eq}, L_{90} and L_{10} were recorded. In addition, site conditions and noise sources were recorded when the equipment was checked and inspected every 2-3 days.
- All the monitoring data stored in the sound level meter system were downloaded through computer software, and all these data were checked and reviewed on computer.
- Noise measurements were not made in presence of fog, rain, wind with a steady speed exceeding $5ms^{-1}$ or wind with gusts exceeding $10ms^{-1}$.

2.5 MAINTENANCE AND CALIBRATION

Maintenance and calibration procedures were as follows:

- The microphone head of the sound level meter and calibrator were cleaned with soft cloth at regular intervals;
- The sound level meter and calibrator were sent to the supplier or HOKLAS laboratory to check and calibrate at yearly interval; and
- Immediately prior to and following each noise measurement, the accuracy of the sound level meter should be checked using an acoustic calibrator generating known sound pressure level at known frequency. Measurements may be accepted as valid only if the calibration levels from before and after the noise measurement agree to within 1.0 dB.

3. BASELINE NOISE MONITORING RESULTS

Baseline noise monitoring was conducted at the four monitoring stations (CM1, CM3, CM4, CM25) for 2 weeks, which commenced on 21 June 2025. For CM3, CM4 and CM25, the baseline noise monitoring ended on 5 July 2025, as expected. However, the baseline noise monitoring at CM1 was found to be interrupted at 23:26 on 21 June 2025. The baseline noise monitoring at CM1 was eventually resumed at around 15:00 on 23 June 2025. Seeing that around 40 hours of monitoring data were not recorded, the baseline noise monitoring at CM1 was extended for 2 days, which ended on 7 July 2025.

Baseline noise monitoring was then conducted at the three monitoring stations (CM9, CM10, CM11) for 2 weeks, which commenced on 9 July 2025. Due to the super typhoon Wipha, the baseline noise monitoring was suspended at 11:00 on 19 July and was resumed at 10:00 on 22 July 2025. Seeing that the noise monitoring was suspended for around 71 hours, the baseline noise monitoring at CM9, CM10 and CM11 were extended for 3 days, which ended on 26 July 2025.

Calibration for the sound level meters was conducted before and after baseline noise monitoring and quality assurance procedures as mentioned in Section 2 has been followed. The detection limit of the sound level meter is 0.1 dB. The difference in the calibration level before and after measurement was equal or less than 1 dB(A), indicating that the measurement is considered valid. Certificates of calibration of sound level meter and calibrator are provided in **Appendix C**.

The baseline noise monitoring results are summarised in **Table 3.1 to 3.3**. All baseline noise monitoring results and graphical presentations of the data are presented in **Appendix D** and **Appendix E**. The weather was generally sunny and occasionally cloudy during the baseline monitoring period for CM1, CM3, CM4, CM25. The weather conditions varied from sunny to rainy during the baseline monitoring period for CM9, CM10, CM11. The noise environment at the baseline noise monitoring locations is dominated by road traffic noise and insect noise. No construction activities were identified in the vicinity of the monitoring stations. Photos of baseline noise monitoring at different monitoring stations are shown in **Appendix F**.

During the baseline monitoring period for CM9, CM10, CM11, short intervals of adverse weather conditions were observed (refer to **Appendix D** for details). It should be noted that during impact monitoring phase, noise monitoring will be conducted for 30mins once a week and will not be conducted during adverse weather (especially during heavy wind and rain). Therefore, the monitoring data over the periods of adverse weather were recorded but were not included in the calculation of average baseline noise levels as shown in **Table 3.1 – 3.3**.

TABLE 3.1 SUMMARY OF NOISE MONITORING RESULTS DURING NORMAL WORKING HOURS (0700-1900 HOURS; NORMAL WEEKDAYS)

Normal Working Hours (0700-1900 hours; Normal Weekdays)	**Measured Noise Level $L_{eq\ (30\ min)}$, dB(A)**		
	Average	**Min**	**Max**
CM1	70.8	68.4	76.5
CM3	57.8	49.2	68.2

Normal Working Hours (0700-1900 hours; Normal Weekdays)	Measured Noise Level $L_{eq\ (30\ min)}$, dB(A)		
	Average	Min	Max
CM4	49.7	42.9	65.6
CM9	66.6	63.0	80.5
CM10	59.4	54.6	80.4
CM11	58.3	50.8	81.9
CM25	53.7	45.2	66.2

TABLE 3.2 SUMMARY OF NOISE MONITORING RESULTS DURING EVENING ON NORMAL WEEKDAYS (1900-2300 HOURS) AND HOLIDAYS (0700-2300 HOURS)

Evening on Normal Weekdays (1900-2300 hours) and Holidays (0700-2300 hours)	Measured Noise Level $L_{eq\ (5\ min)}$, dB(A)		
	Average	Min	Max
CM1	68.0	63.0	76.8
CM3	57.8	48.2	76.3
CM4	49.5	40.4	68.3
CM9	62.6	56.4	77.5

CM11	53.2	47.2	82.6
CM25	50.5	40.2	85.9

4. ACTION AND LIMIT LEVEL

The Action and Limit Levels were established in accordance with the EM&A Manual. The baseline noise level should be referenced during the compliance check during the impact noise monitoring period. The Action and Limit Levels for the construction noise are shown in **Table 4.1**.

TABLE 4.1 ACTION AND LIMIT LEVELS FOR CONSTRUCTION NOISE

Time Period	Action Level	Limit Level
0700 – 1900 hours on normal weekdays	When one documented complaint is received	75 dB(A)*

Notes:

1. If works are to be carried out during restricted hours, the conditions stipulated in the Construction Noise Permit (CNP) issued by the Noise Control Authority have to be followed.
2. *70 dB(A) and 65 dB(A) for schools during normal teaching periods and school examination periods, respectively.

5. EVENT AND ACTION PLAN

Should non-compliance of the noise criteria occur, actions in accordance with the Action Plan in **Table 5.1** shall be carried out.

TABLE 5.1 EVENT AND ACTION PLAN FOR CONSTRUCTION NOISE

Event	Action			
	ET	**IEC**	**ER**	**Contractor**
Action Level	1. Notify IEC and Contractor; 2. Carry out investigation; 3. Report the results of investigation to the IEC, ER and Contractor; 4. Discuss with the Contractor and formulate remedial measures; and 5. Increase monitoring frequency to check mitigation effectiveness.	1. Review the analysed results submitted by the ET; 2. Review the proposed remedial measures by the Contractor and advise the ER accordingly; and 3. Supervise the implementation of remedial measures.	1. Confirm receipt of notification of failure in writing; 2. Notify Contractor; 3. Require Contractor to propose remedial measures for the analysed noise problem; and 4. Ensure remedial measures are properly implemented.	1. Submit noise mitigation proposals to IEC; and 2. Implement noise mitigation proposals.
Limit Level	1. Identify source; 2. Inform IEC, ER, EPD and Contractor; 3. Repeat measurements to confirm findings; 4. Increase monitoring frequency; 5. Carry out analysis of Contractor's working procedures to determine possible mitigation to be implemented;	1. Discuss amongst ER, ET, and Contractor on the potential remedial actions; 2. Review Contractors remedial actions whenever necessary to assure their effectiveness and advise the ER accordingly; and 3. Supervise the implementation of remedial measures.	1. Confirm receipt of notification of failure in writing; 2. Notify Contractor; 3. Require Contractor to propose remedial measures for the analysed noise problem; 4. Ensure remedial measures properly implemented; and 5. If exceedance continues, consider what portion of	1. Take immediate action to avoid further exceedance; 2. Submit proposals for remedial actions to IEC within 3 working days of notification; 3. Implement the agreed proposals; 4. Resubmit proposals if problem still not under control; and 5. Stop the relevant portion of works as determined by

Event	Action			
	ET	**IEC**	**ER**	**Contractor**
	6. Inform IEC, ER and EPD the causes and actions taken for the exceedances; 7. Assess effectiveness of Contractor's remedial actions and keep IEC, EPD and ER informed of the results; and 8. If exceedance stops, cease additional monitoring.		the work is responsible and instruct the Contractor to stop that portion of work until the exceedance is abated.	the ER until the exceedance is abated.

6. CONCLUSION

6.1 REVISION FOR INCLUSION IN THE EM&A MANUAL

In accordance with EP-640/2024, EP/641/2024 and the EM&A Manual of the Project, baseline noise monitoring was undertaken prior to commencement of the construction works of works contract ND/2024/09 and ND/2024/10. This report summarizes the baseline monitoring locations, requirements, and equipment adopted for conducting baseline noise monitoring, all of which fully comply with EM&A Manual without any changes.

Baseline noise monitoring was conducted at four (4) monitoring stations, including CM1, CM3, CM4 and CM25. Baseline noise monitoring commenced on 21 June 2025 and completed on 5 July 2025 (baseline noise monitoring for CM1 extended to 7 July 2025). Baseline noise monitoring was then conducted at three (3) monitoring stations within 300m of the works contract ND/2024/10, including CM9, CM10 and CM11, for at least 2 weeks from 9 July 2025 to 26 July 2025 (baseline noise monitoring suspended at 11:00 on 19 July 2025 and resumed at 10:00 on 22 July 2025, and thus extended to 26 July 2025). The major noise sources identified at the monitoring station are the noise from road traffic and insects. There were no construction activities identified in the vicinity of the monitoring stations. The baseline monitoring results are considered representative of the ambient noise level. Action and limit levels for impact noise monitoring were established.

Legends

Contract Completion Date

Remarks:

Commencement of Construction

1. The Contractor's programme is based on the access date according to the contract
2. The Completion Date of the whole of the works is 31 August 2027.
3. Potential delay in section 1 is observed due to the late handover of Pond D and E targetting in Q4 2025 by LandsD, which is approximate 1 year slipped from the original access date on 31 December 2024.
4. Apart from section 2A and 2B, potential delay in other sections are observed due to the late land handover in Q4 2025 by LandsD, which is approximate 2 months slipped from the original access date on 2 October 2025.
5. Potential delay due to the re-provision of Pavilion at Mai Po Tsuen and Tun Fu issue are observed. It is anticipated that the reprovision works will take about 4 months while the details and extent of Tun Fu issue shall be further confirmed.
6. Mitigation measures for noise impact including use of QPME, use of movable noise barriers for PME, use of full enclosure for generator, and use of non-percussive equipment and method would be undertaken throughout the construction phase. Details of the mitigation measures for noise impact refer to Appendix C of the EM&A Manual.
7. For 'Land Decontamination and Arsenic Works', the construction equipment i.e. roller and excavator should not be used simultaneously with backhoe and bulldozer.

The baseline noise monitoring was suspended at 09:30 on 19 July 2025 due to adverse weather. The baseline noise monitoring will be resumed at 10:00 on 22 July 2025 and will end on 26 July 2025.

APPENDIX C CALIBRATION CERTIFICATE FOR THE NOISE MONITORING EQUIPMENT

Certificate of Calibration

for

Description:	***Sound Level Calibrator***
Manufacturer:	***Larson Davis***
Type No.:	***CAL200***
Serial No.:	***16878***

Submitted by:

Customer:	*Envirotech Services Co.*
Address:	*Rm.712, 7/F., My Loft, 9 Hoi Wing Road,*
	Tuen Mun, Hong Kong

Upon receipt for calibration, the instrument was found to be:

☑ **Within**
☐ **Outside**

the allowable tolerance.

The test equipments used for calibration are traceable to National Standards via:
- The Government of The Hong Kong Special Administrative Region Standard & Calibration Laboratory

Date of receipt: 25 September 2024

Date of calibration: 27 September 2024

Date of NEXT calibration: 26 September 2025

Calibrated by: _____
Calibration Technician

Certified by: _____
Mr. Ng Yan Wa
Laboratory Manager

Date of issue: 27 September 2024

ACOUSTICS AND AIR TESTING LABORATORY (A+A)*L

Room 422,Leader Industrial Centre,57-59 Au Pui Wan Street ,Fo Tan, Shatin,N.T.,Hong Kong

Homepage: http://www.aa-lab.com E-mail : inquiry@aa-lab.com

1. *Calibration Precautions:*

- The unit-under-test (UUT) was allowed to stabilize in the laboratory for over 24 hours, and switched on to warm up for over 10 minutes before the commencement of the test.
- The results presented are the mean of 3 measurements at each calibration point.

2. *Calibration Specifications:*

Calibration check

3. *Calibration Conditions:*

Air Temperature:	24.9 °C
Air Pressure:	1006 hPa
Relative Humidity:	54.5 %

4. *Calibration Equipment:*

Test Equipment	Type	Serial No.	Calibration Report Number	Traceable to
Multifunction Calibrator	B&K 4226	2288467	AV240081	HOKLAS
Sound Level Meter	RION NA-28	30721812	AV240109	HOKLAS

5. *Calibration Results*

5.1 Sound Pressure Level

Nominal value dB	Accept lower level dB	Accept upper level dB	Measured value dB
94.0	93.6	94.4	93.6
114.0	113.6	114.4	113.7

6. *Calibration Results Applied*

The results apply to the particular unit-under-test only. All calibration points are within manufacture's specification as IEC 60942 Class 1.

Note:
The values given in this certification only related to the values measured at the time of the calibration.

Certificate of Calibration

Name : **Class 1 Sound Level Meter**

Model : **NL-53** **S/No.** : **00452006**

Date of Calibration : **April, 23, 2025**

We hereby certify that the above product was tested and calibrated according to the prescribed Rion procedures, and that it fulfills specification requirements.
The measuring equipment and reference devices used for testing and calibrating this unit are managed under the Rion traceability system and are traceable according to official Japanese standards and official standards of countries belonging to the International Committee of Weights and Measures.

Note:

* Due to tropical cyclone, baseline noise monitoring at CM9 was suspended on 19 July 2025 at 11:00 and resumed on 22 July 2025 at 10:00.

** Due to adverse weather (i.e. amber/red/black rainstorm warning signal or Typhoon), data will not be included in the calculation of average measured noise level in Table 3.1.

Note:

* Due to tropical cyclone, baseline noise monitoring at CM9 was suspended on 19 July 2025 at 11:00 and resumed on 22 July 2025 at 10:00.

** Due to adverse weather (i.e. amber/red/black rainstorm warning signal or Typhoon), data will not be included in the calculation of average measured noise level in Table

Measured Noise Levels (dB(A)) at CM9 during Night-time (2300-0700 hours)

Note:

* Due to tropical cyclone, baseline noise monitoring at CM9 was suspended on 19 July 2025 at 11:00 and resumed on 22 July 2025 at 10:00.

** Due to adverse weather (i.e. amber/red/black rainstorm warning signal or Typhoon), data will not be included in the calculation of average measured noise level in Table 3.3.

Measured Noise Levels (dB(A)) at CM10 during Normal Working Hours (0700-1900 hours)

Note:

* Due to tropical cyclone, baseline noise monitoring at CM10 was suspended on 19 July 2025 at 11:00 and resumed on 22 July 2025 at 10:00.

** Due to adverse weather (i.e. amber/red/black rainstorm warning signal or Typhoon), data will not be included in the calculation of average measured noise level in Table 3.1

Note:

* Due to tropical cyclone, baseline noise monitoring at CM11 was suspended on 19 July 2025 at 11:00 and resumed on 22 July 2025 at 10:00.

** Due to adverse weather (i.e. amber/red/black rainstorm warning signal or Typhoon), data will not be included in the calculation of average measured noise level in Tab

Measured Noise Levels (dB(A)) at CM11 during Night-time (2300-0700 hours)

Note:

* Due to tropical cyclone, baseline noise monitoring at CM11 was suspended on 19 July 2025 at 11:00 and resumed on 22 July 2025 at 10:00.

** Due to adverse weather (i.e. amber/red/black rainstorm warning signal or Typhoon), data will not be included in the calculation of average measured noise level in Table 3.1.

APPENDIX E GRAPHICAL PRESENTATION OF NOISE MONITORING RESULTS

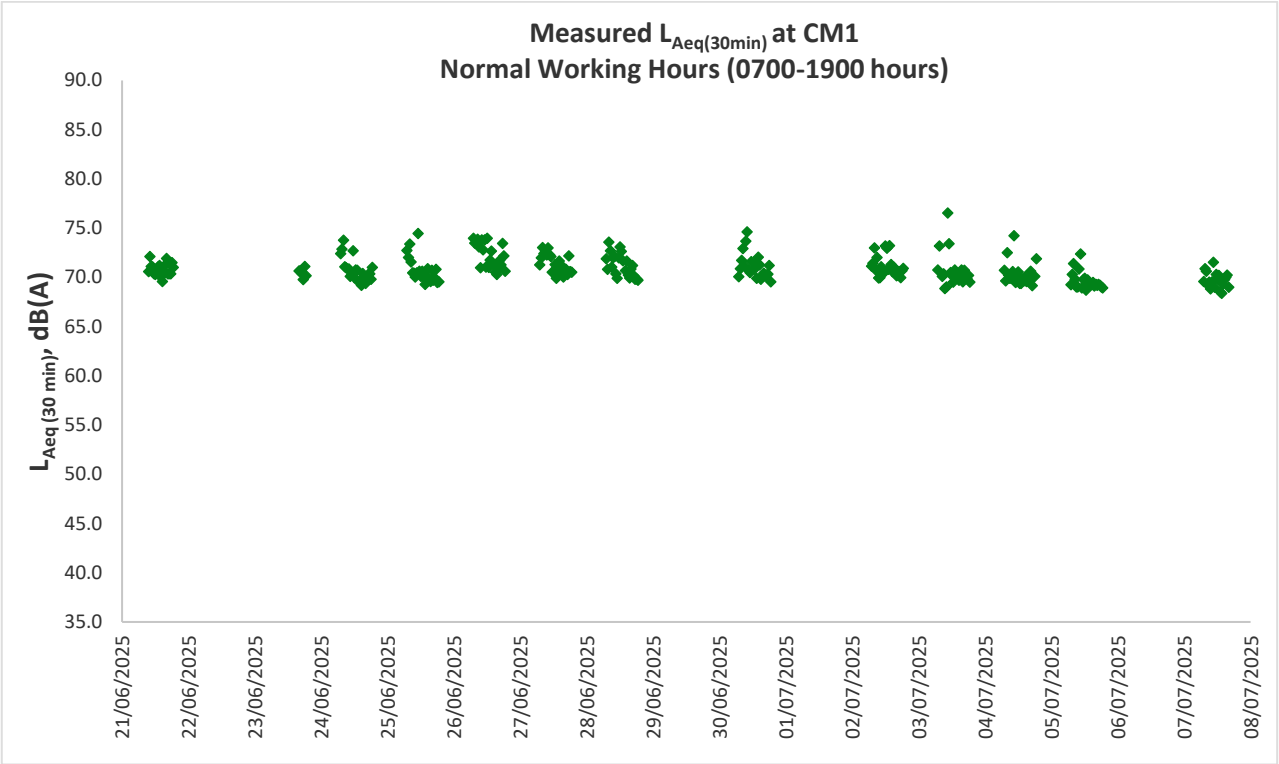

Figure 1: Measured $L_{Aeq\ (30\ min)}$ at Station CM1 during Normal Working Hours (0700-1900 hours) between 21 June 2025 to 7 July 2025

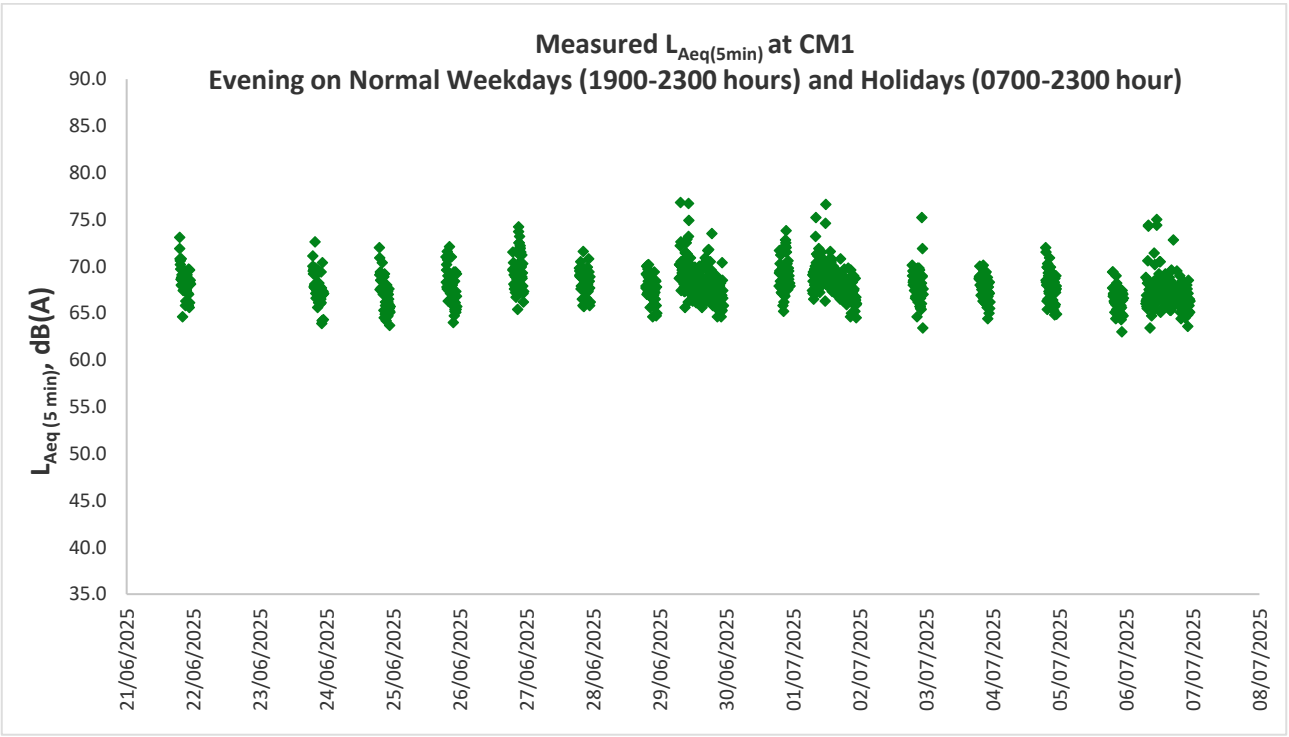

Figure 2: Measured $L_{Aeq\ (5\ min)}$ at Station CM1 during Evening on Normal Weekdays (1900-2300 hours) and Holidays (0700-2300 hours) between 21 June 2025 to 7 July 2025

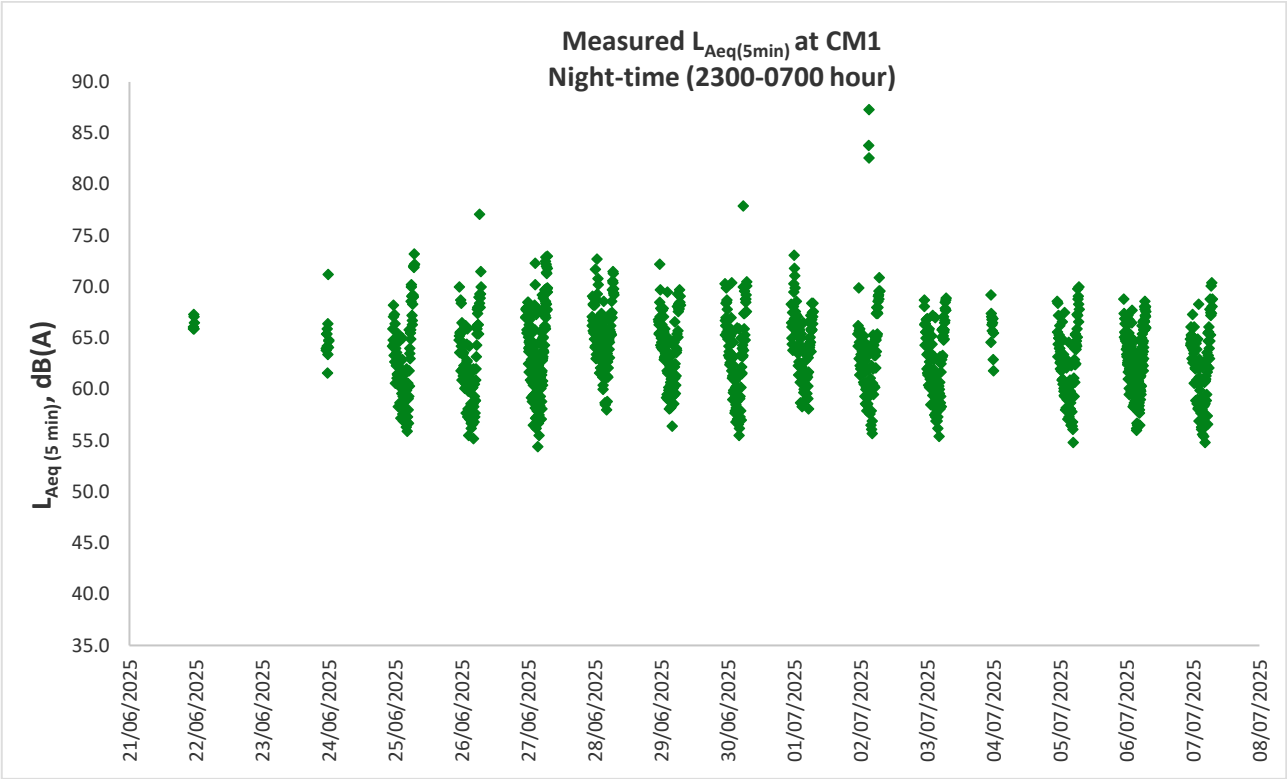

Figure 3: Measured $L_{Aeq\ (5\ min)}$ at Station CM1 during Night-time (2300-0700 hours) between 21 June 2025 to 7 July 2025

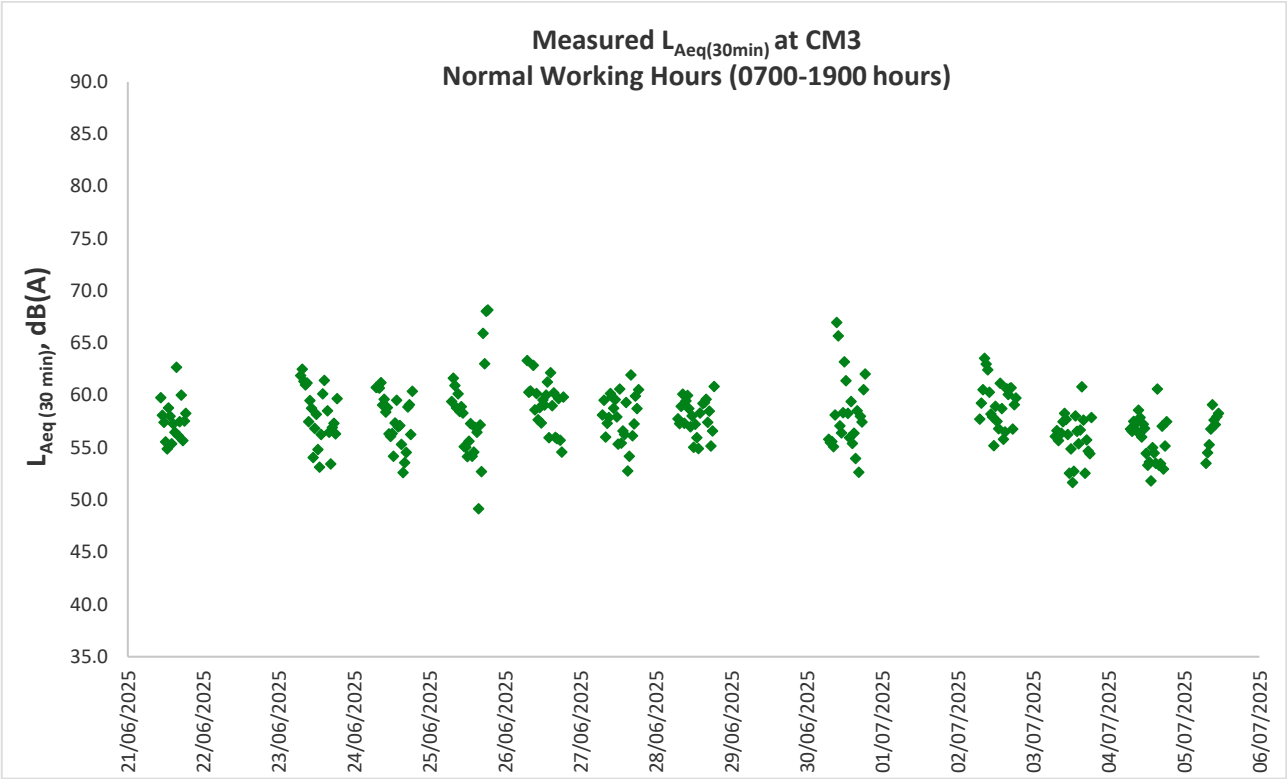

Figure 4: Measured $L_{Aeq\ (30\ min)}$ at Station CM3 during Normal Working Hours (0700-1900 hours) between 21 June 2025 to 5 July 2025

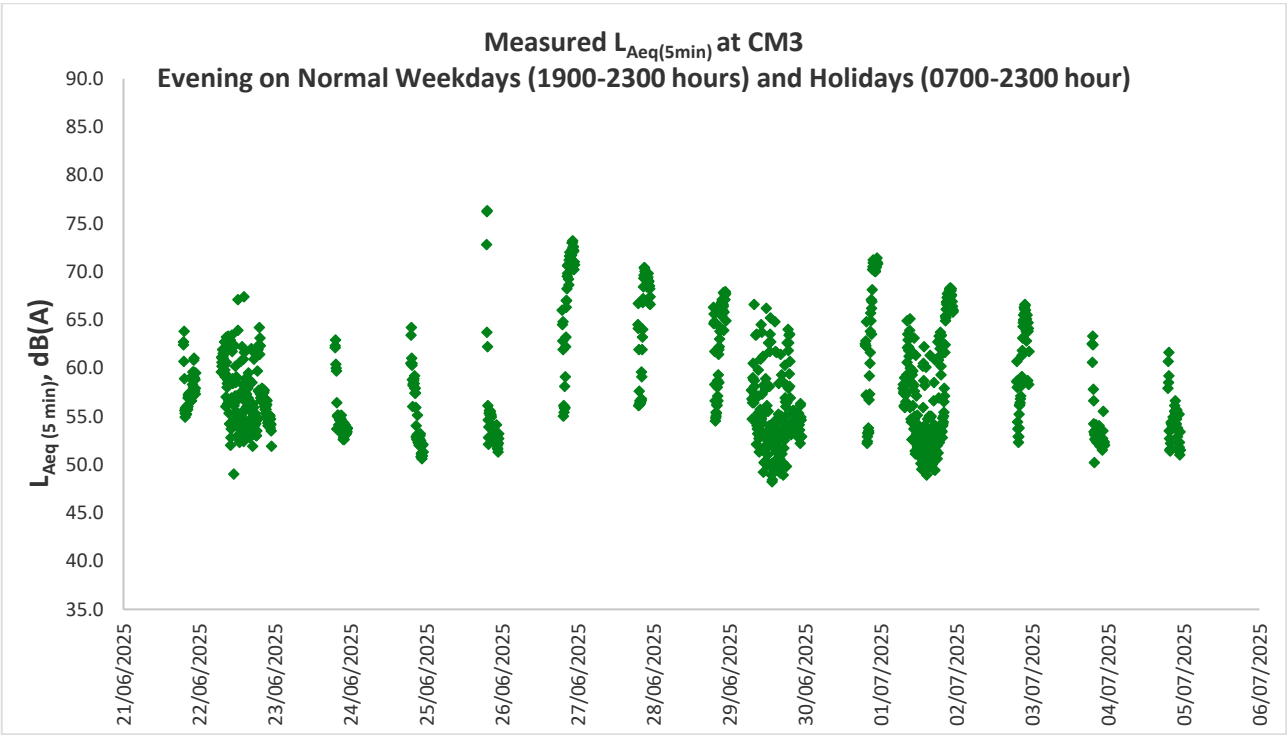

Figure 5: Measured $L_{Aeq\ (5\ min)}$ at Station CM3 during Evening on Normal Weekdays (1900-2300 hours) and Holidays (0700-2300 hours) between 21 June 2025 to 5 July 2025

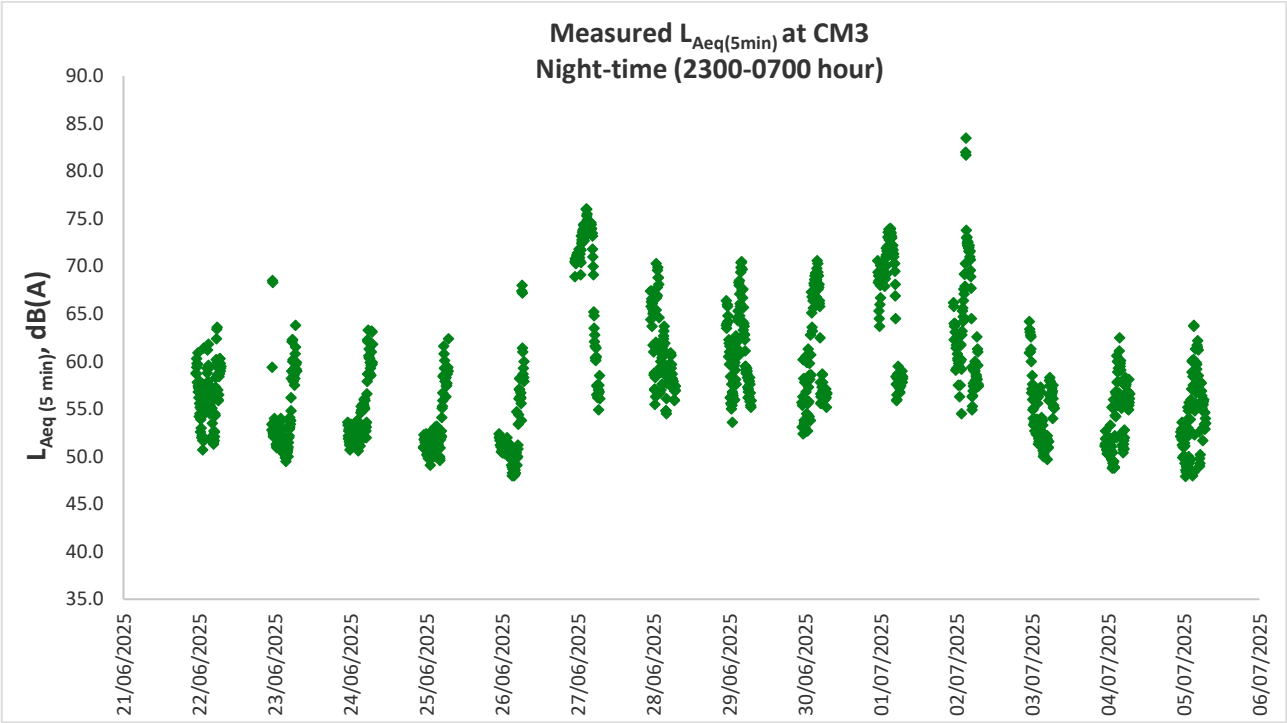

Figure 6: Measured $L_{Aeq\ (5\ min)}$ at Station CM3 during Night-time (2300-0700 hours) between 21 June 2025 to 5 July 2025

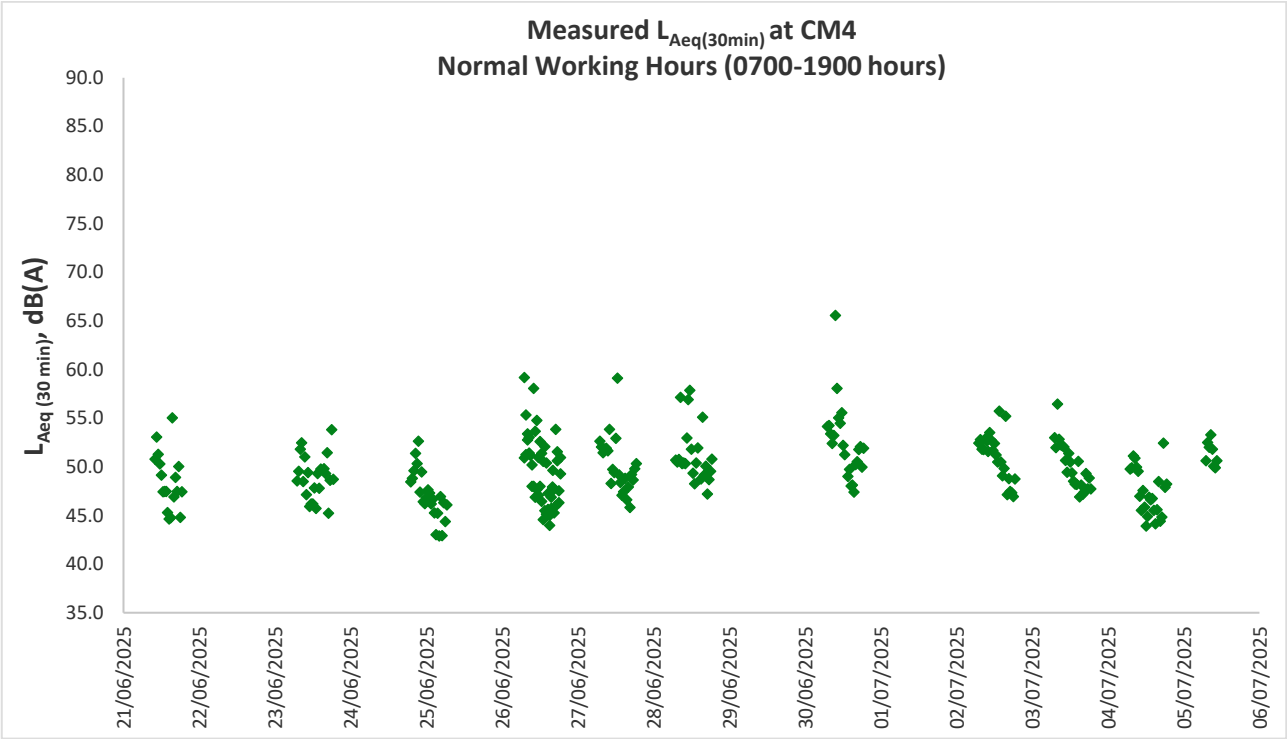

Figure 7: Measured $L_{Aeq\ (30\ min)}$ at Station CM4 during Normal Working Hours (0700-1900 hours) between 21 June 2025 to 5 July 2025

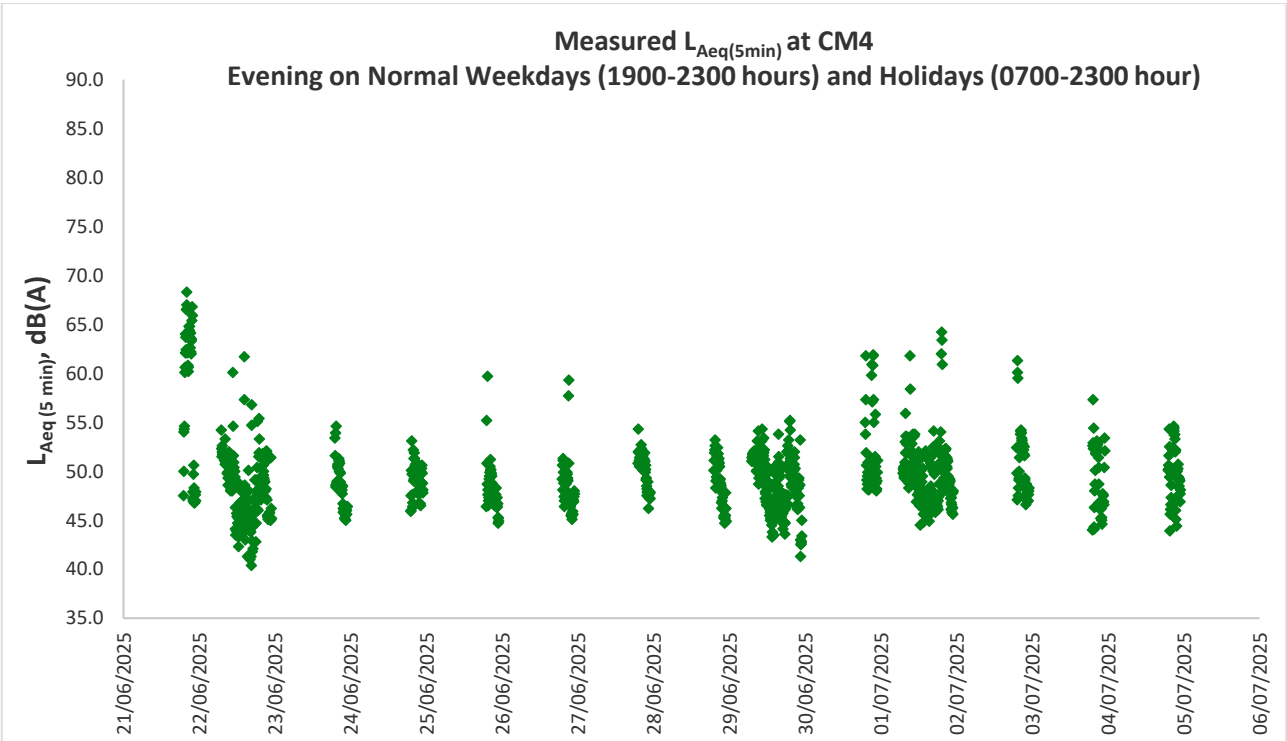

Figure 8: Measured $L_{Aeq\ (5\ min)}$ at Station CM4 during Evening on Normal Weekdays (1900-2300 hours) and Holidays (0700-2300 hours) between 21 June 2025 to 5 July 2025

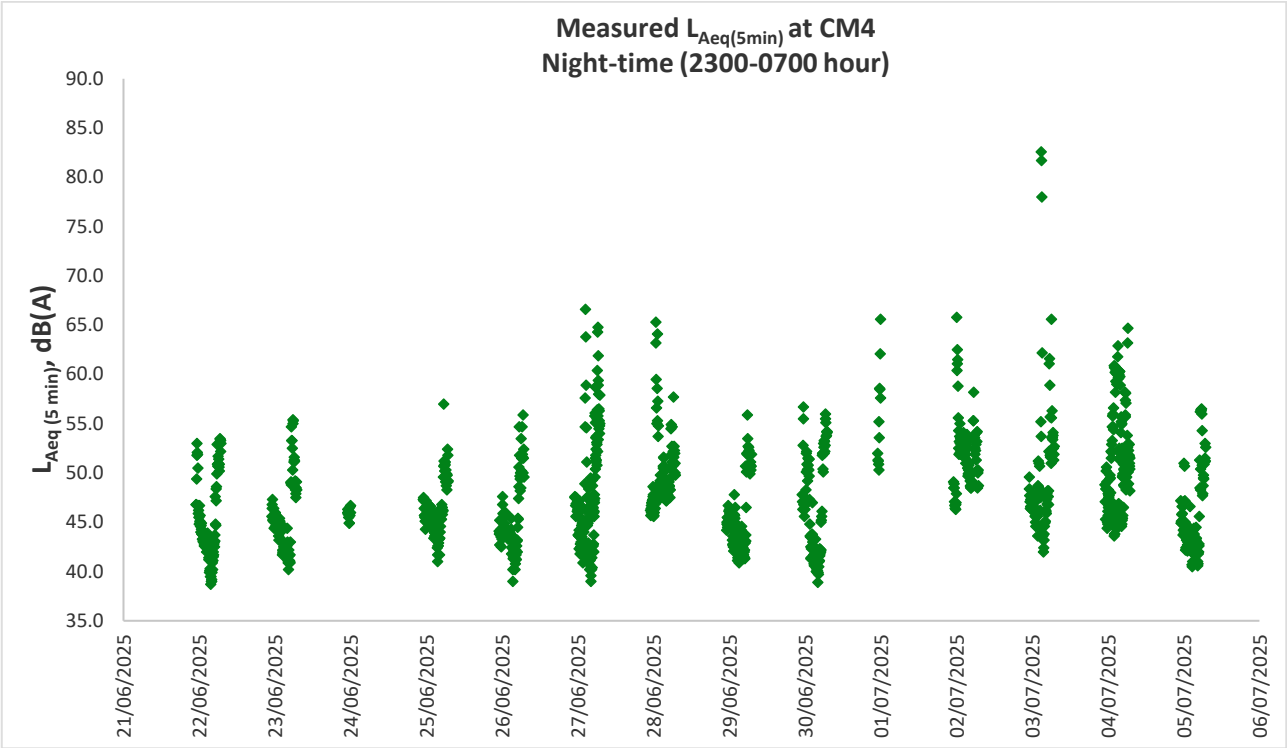

Figure 9: Measured $L_{Aeq\ (5\ min)}$ at Station CM4 during Night-time (2300-0700 hours) between 21 June 2025 to 5 July 2025

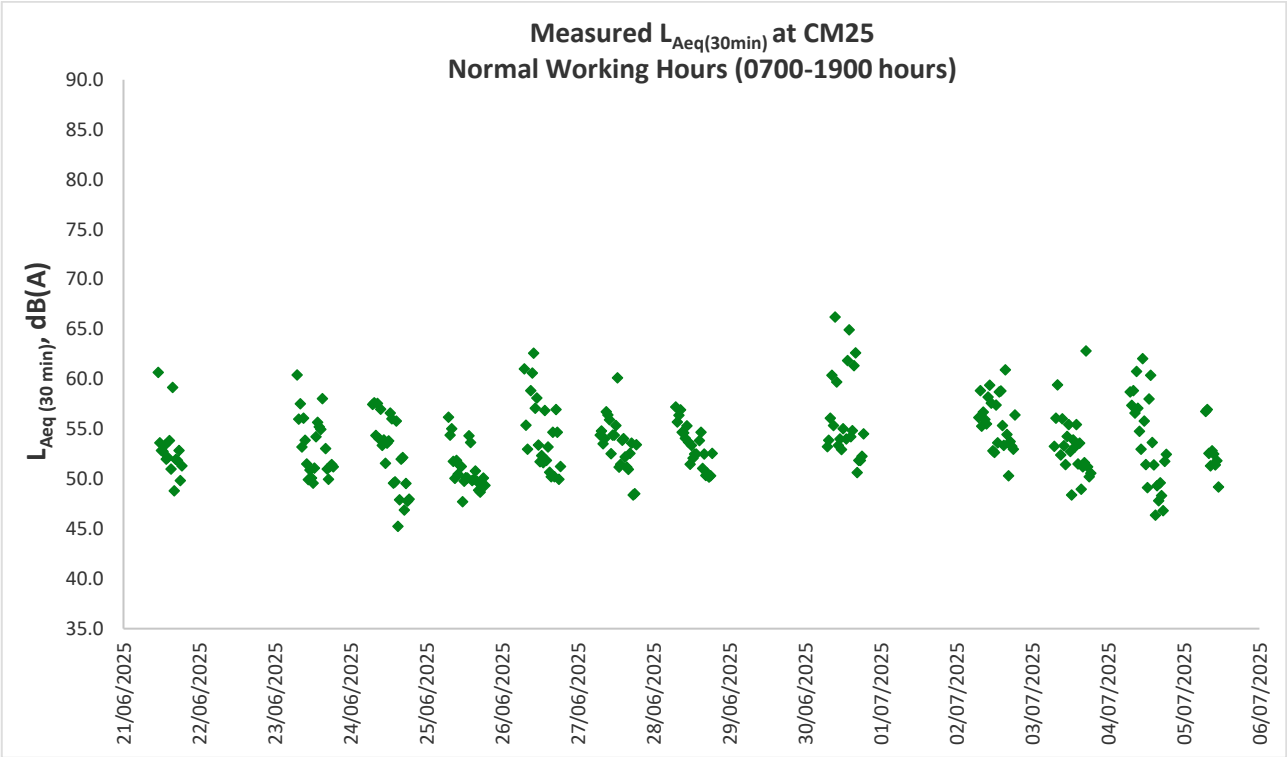

Figure 10: Measured $L_{Aeq\ (30\ min)}$ at Station CM25 during Normal Working Hours (0700-1900 hours) between 21 June 2025 to 5 July 2025

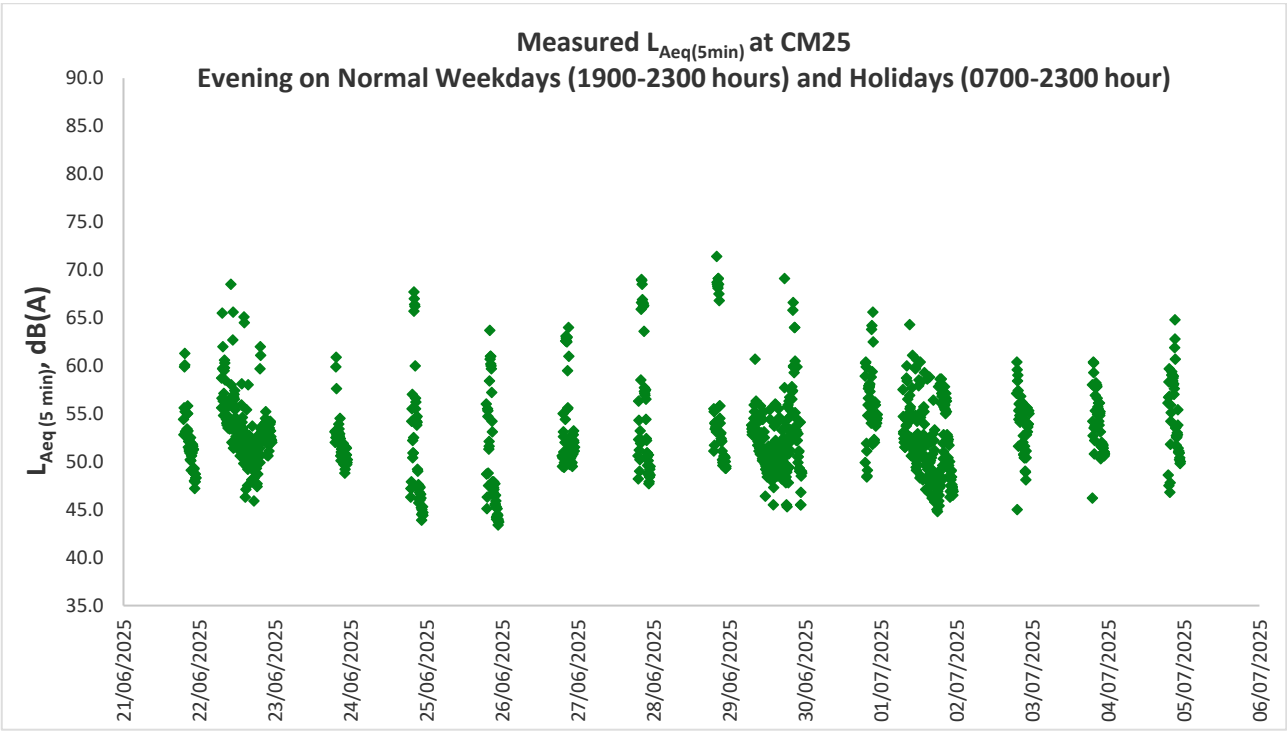

Figure 11: Measured $L_{Aeq\ (5\ min)}$ at Station CM25 during Evening on Normal Weekdays (1900-2300 hours) and Holidays (0700-2300 hours) between 21 June 2025 to 5 July 2025

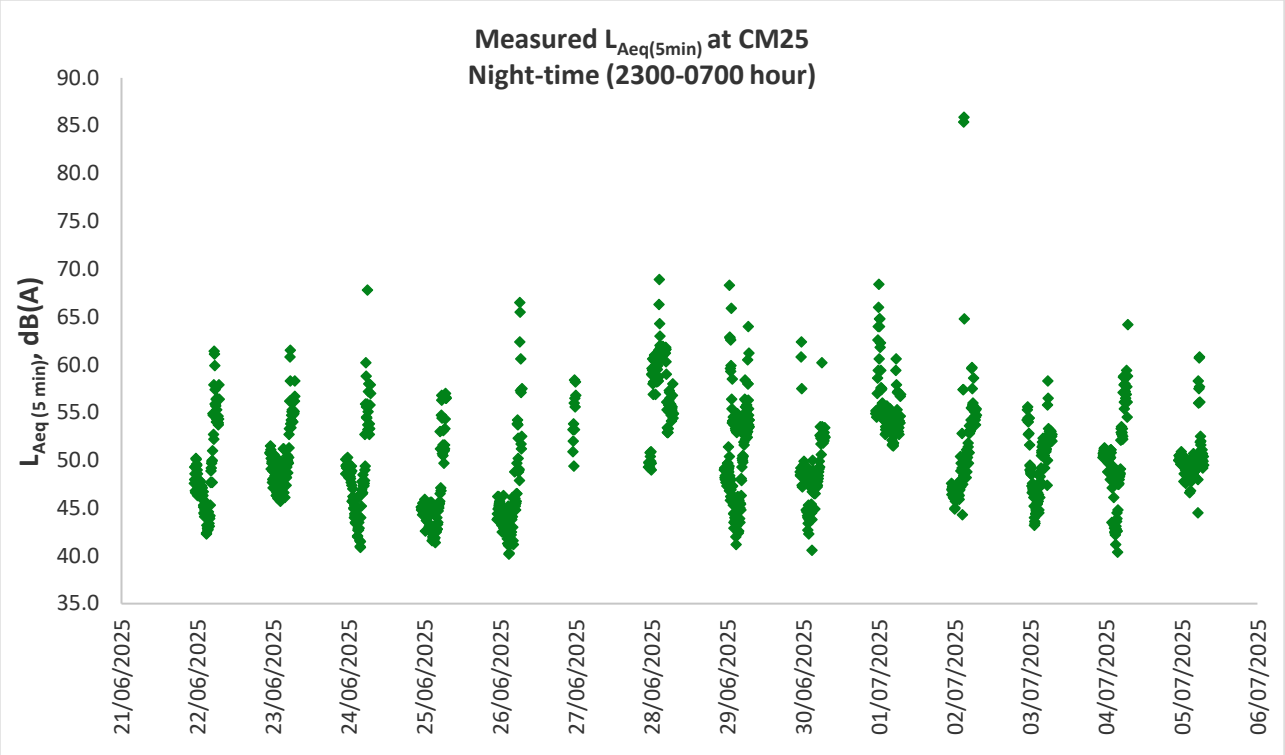

Figure 12: Measured $L_{Aeq\ (5\ min)}$ at Station CM25 during Night-time (2300-0700 hours) between 21 June 2025 to 5 July 2025

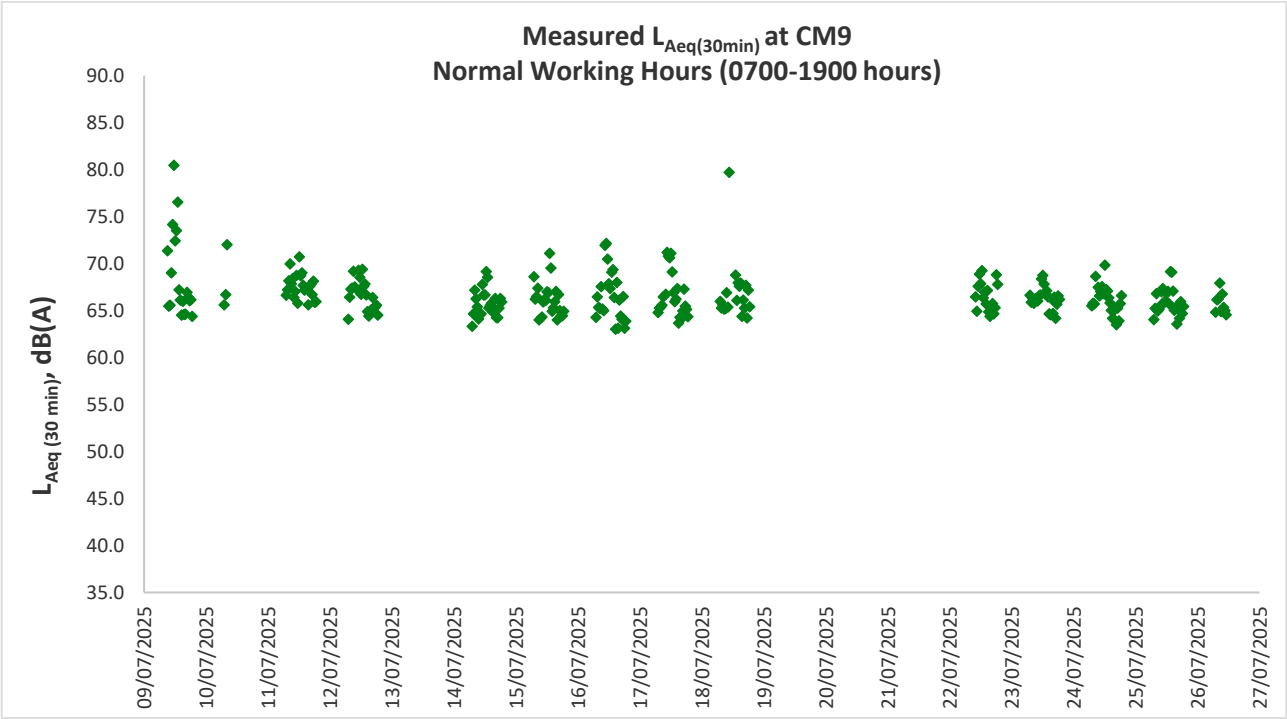

Figure 13: Measured $L_{Aeq\ (30\ min)}$ at Station CM9 during Normal Working Hours (0700-1900 hours) between 9 July 2025 to 26 July 2025

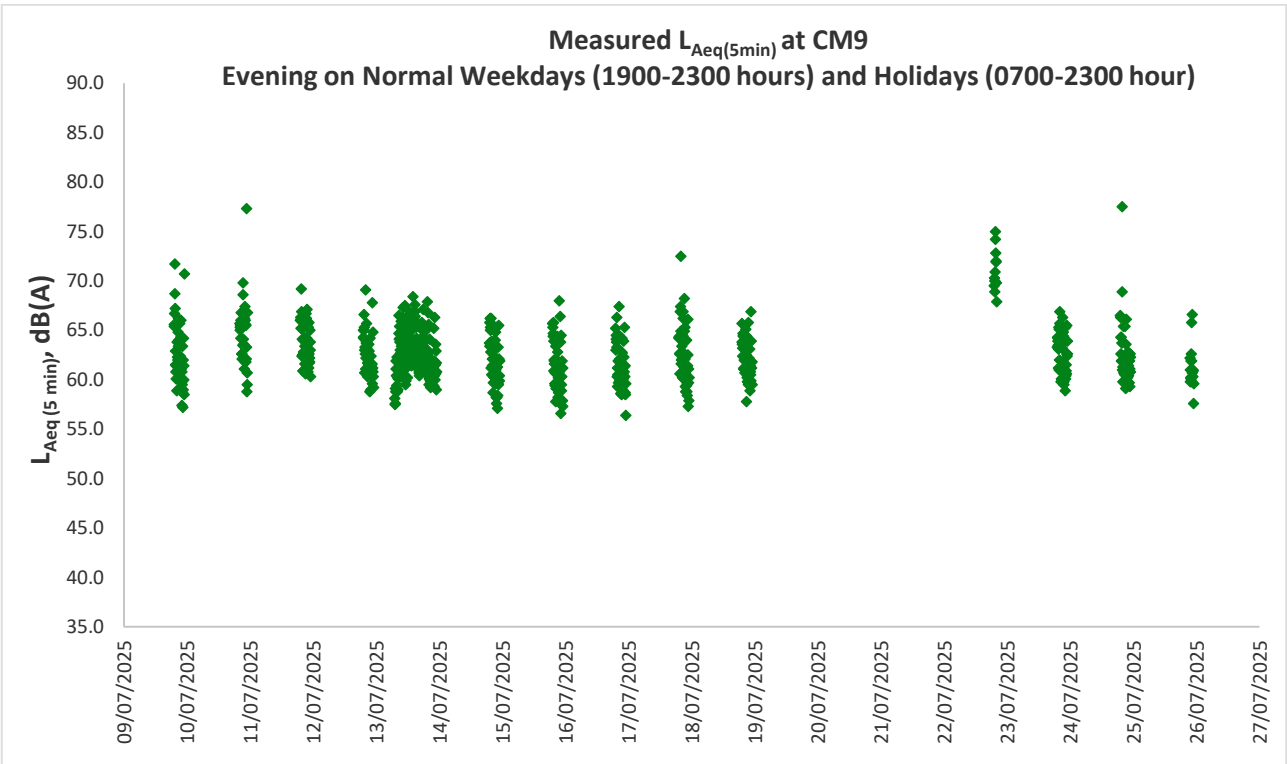

Figure 14: Measured $L_{Aeq\ (5\ min)}$ at Station CM9 during Evening on Normal Weekdays (1900-2300 hours) and Holidays (0700-2300 hours) between 9 July 2025 to 26 July 2025

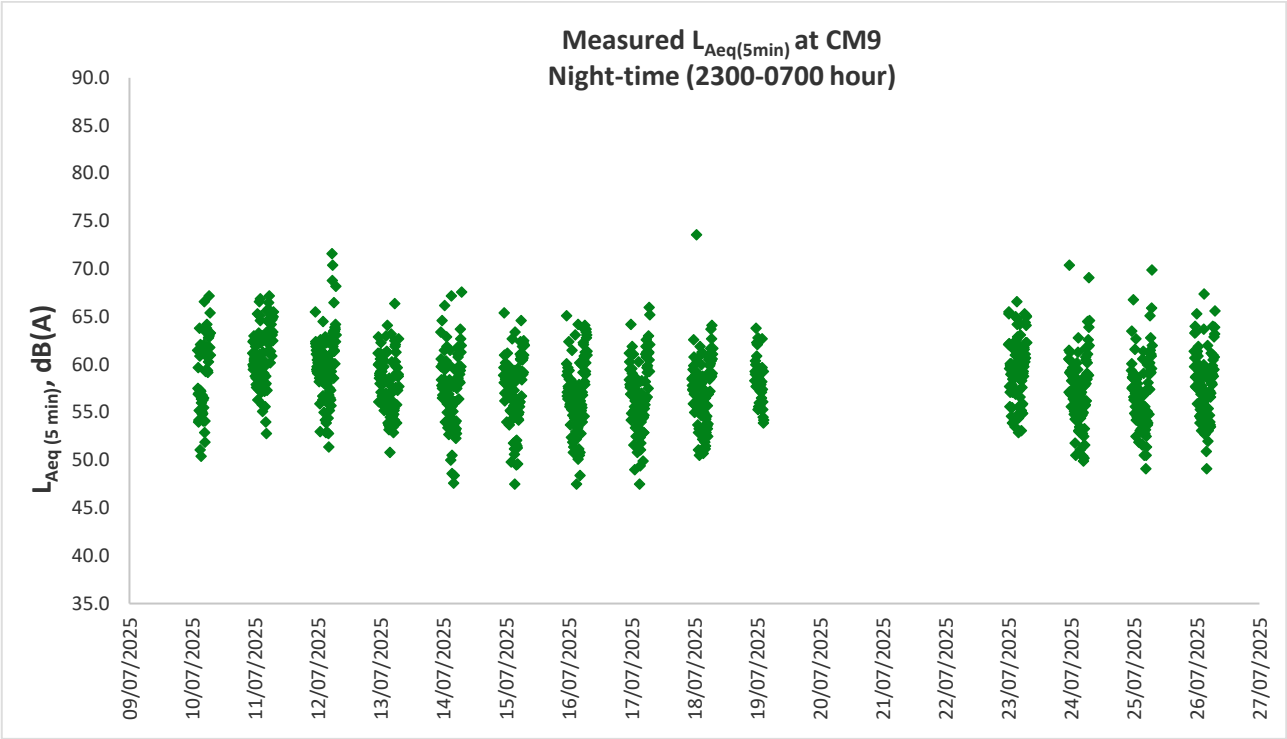

Figure 15: Measured $L_{Aeq\ (5\ min)}$ at Station CM9 during Night-time (2300-0700 hours) between 9 July 2025 to 26 July 2025

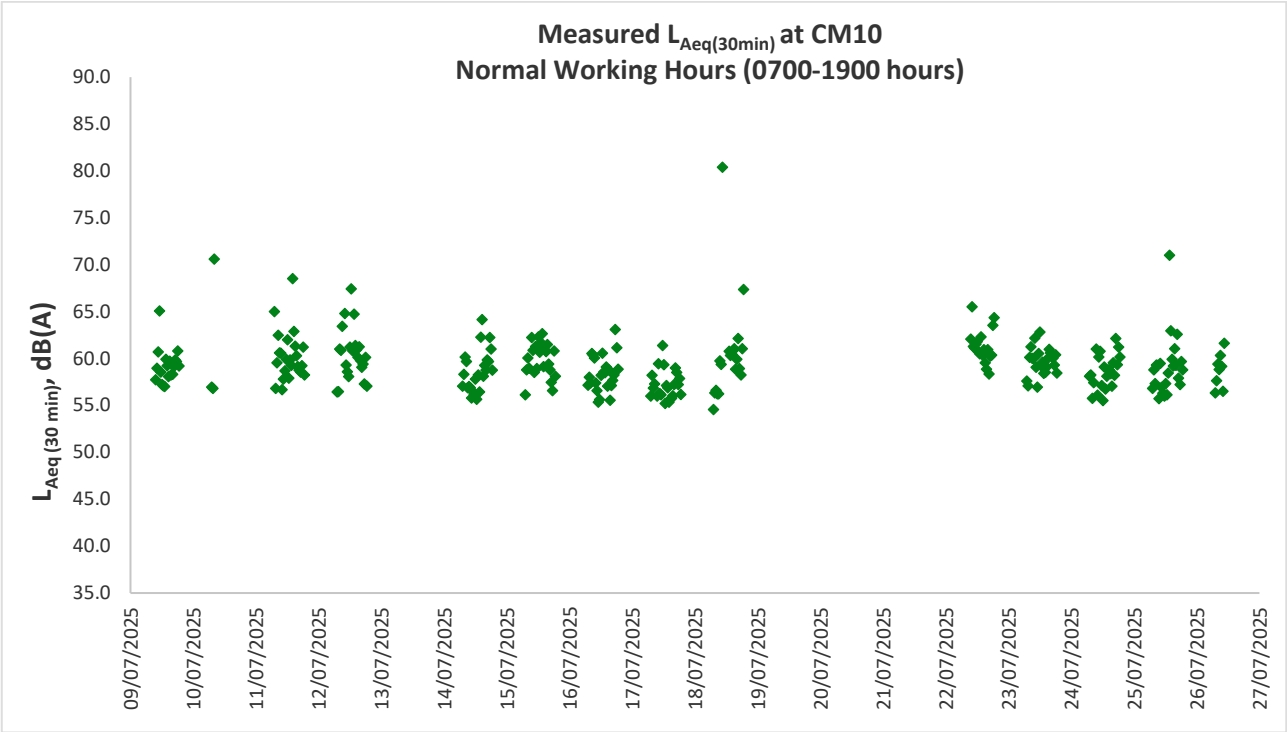

Figure 16: Measured $L_{Aeq\ (30\ min)}$ at Station CM10 during Normal Working Hours (0700-1900 hours) between 9 July 2025 to 26 July 2025

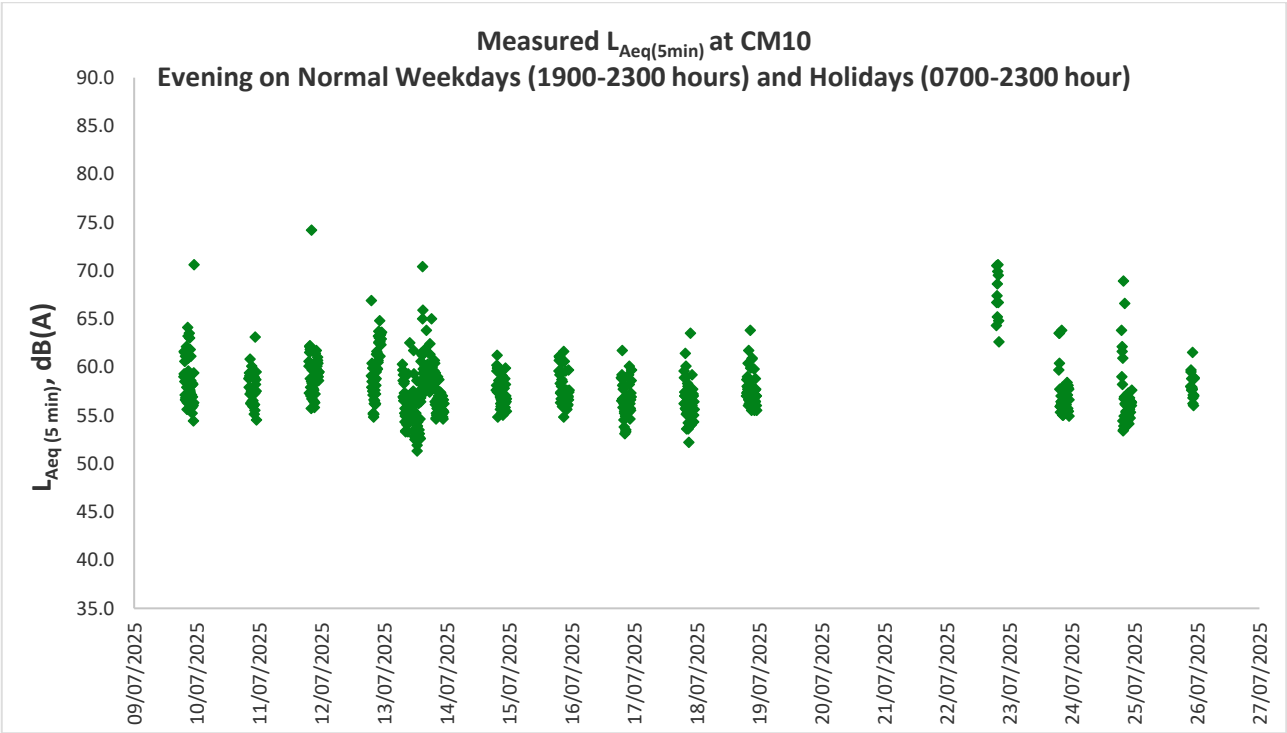

Figure 17: Measured $L_{Aeq\ (5\ min)}$ at Station CM10 during Evening on Normal Weekdays (1900-2300 hours) and Holidays (0700-2300 hours) between 9 July 2025 to 26 July 2025

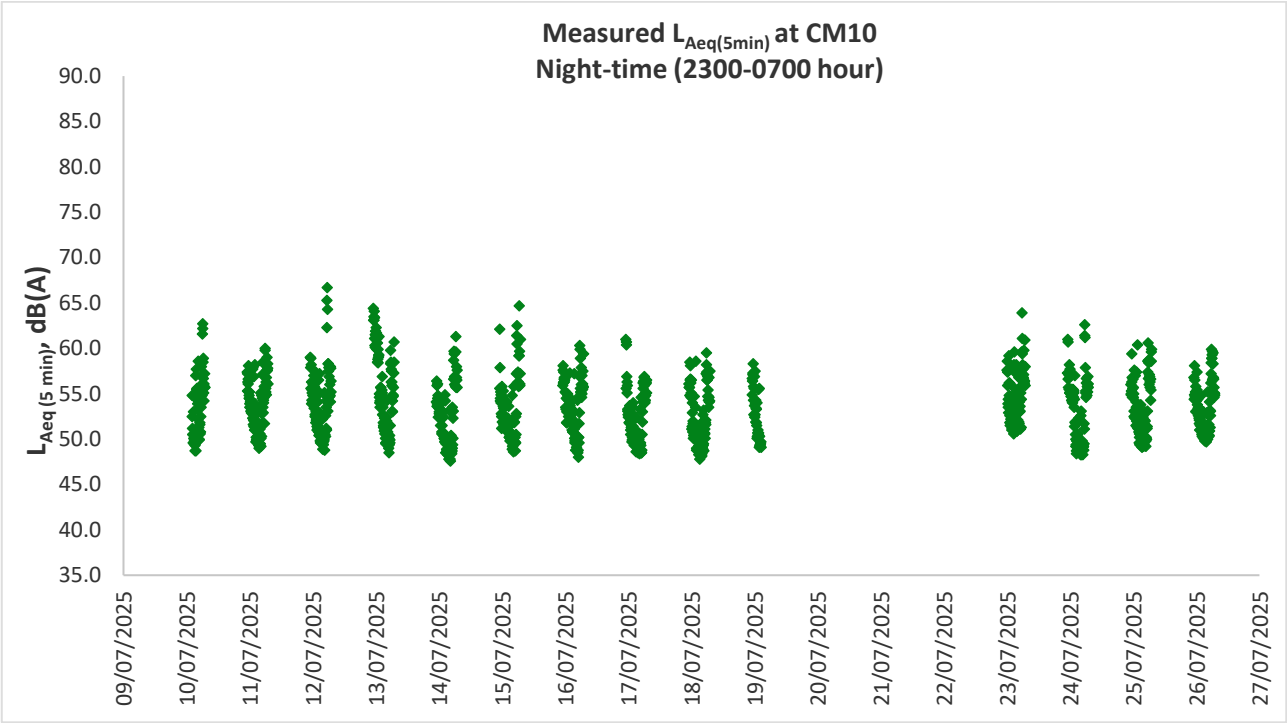

Figure 18: Measured $L_{Aeq\ (5\ min)}$ at Station CM10 during Night-time (2300-0700 hours) between 9 July 2025 to 26 July 2025

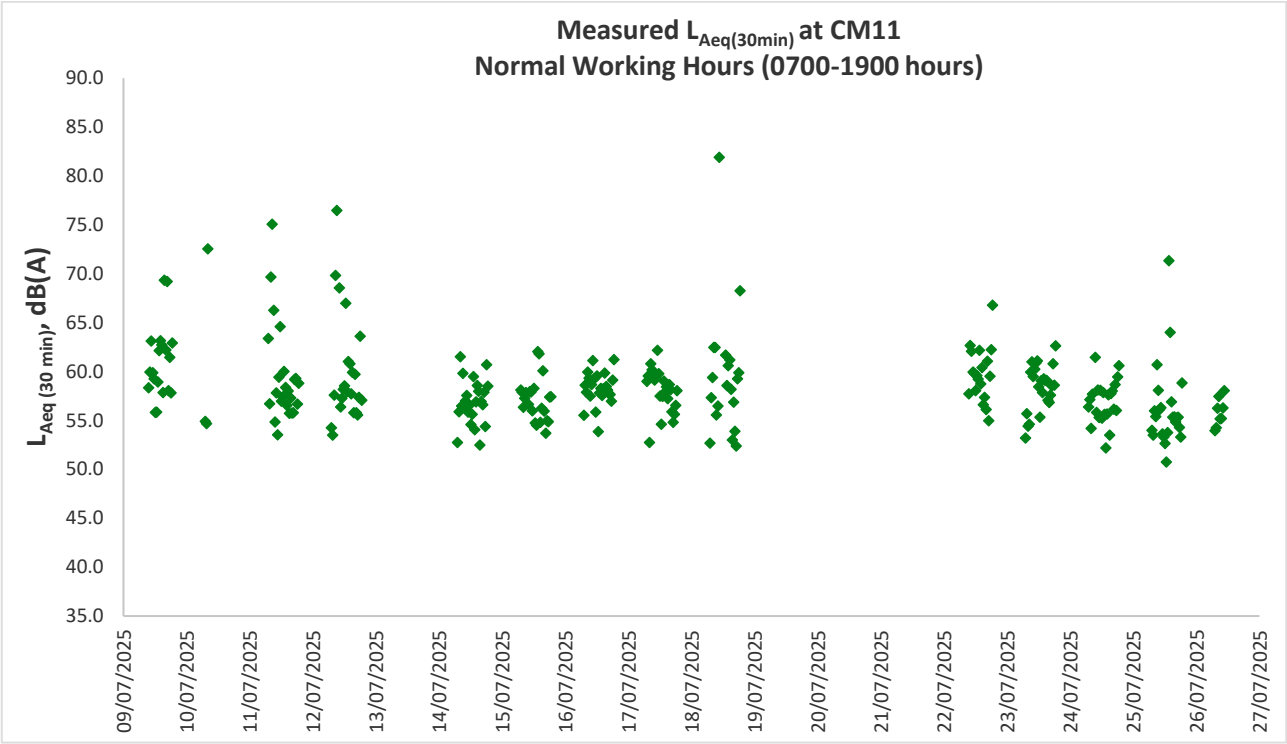

Figure 19: Measured $L_{Aeq\ (30\ min)}$ at Station CM11 during Normal Working Hours (0700-1900 hours) between 9 July 2025 to 26 July 2025

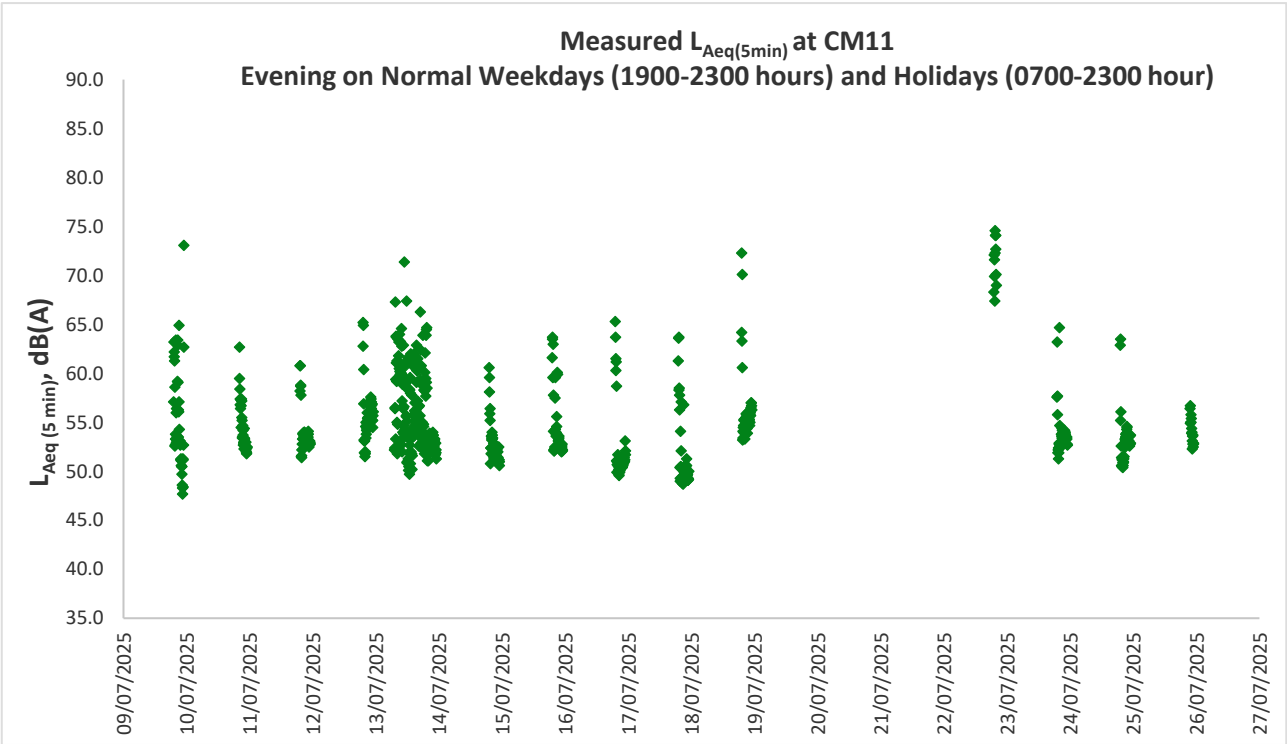

Figure 20: Measured $L_{Aeq\ (5\ min)}$ at Station CM11 during Evening on Normal Weekdays (1900-2300 hours) and Holidays (0700-2300 hours) between 9 July 2025 to 26 July 2025

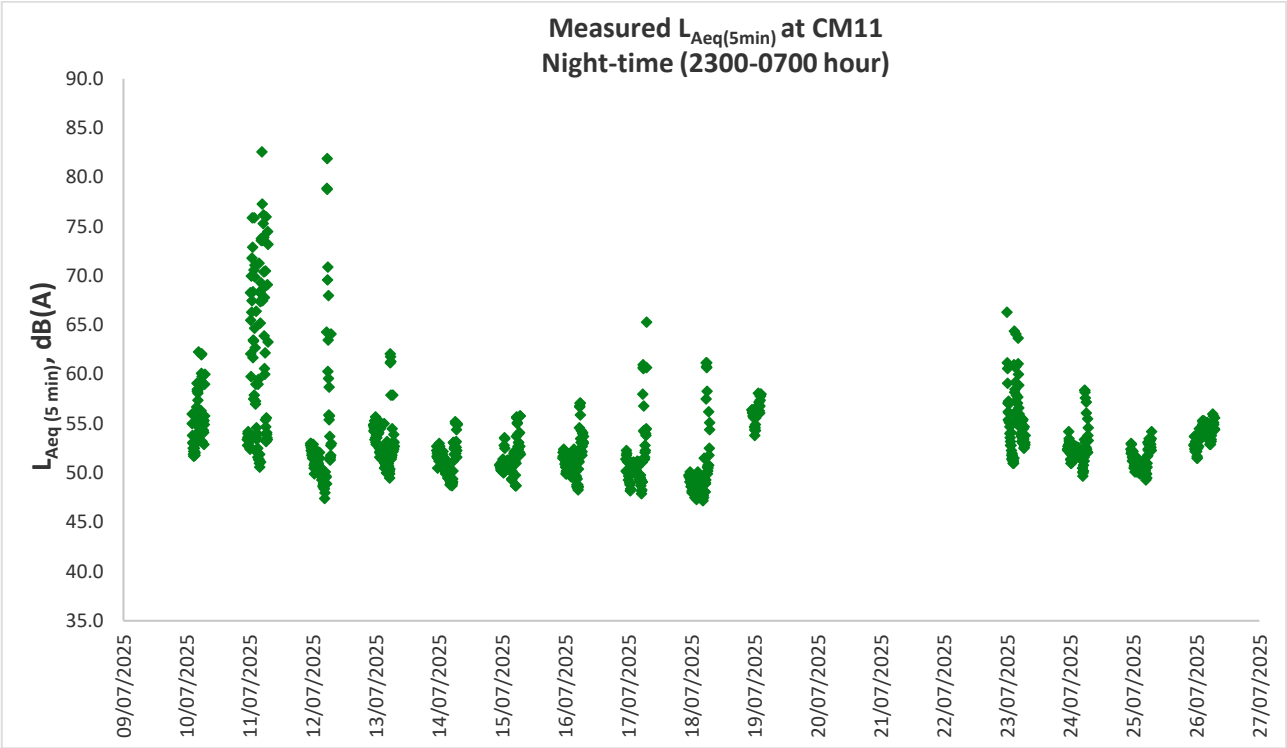

Figure 21: Measured $L_{Aeq\ (5\ min)}$ at Station CM11 during Night-time (2300-0700 hours) between 9 July 2025 to 26 July 2025

APPENDIX F PHOTO RECORDS OF BASELINE NOISE MONITORING

Monitoring Station:	CM1
Location:	69 Mai Po San Tsuen
Period of Baseline Noise Monitoring:	21 June 2025 – 7 July 2025
Photo of Baseline Noise Monitoring:	

Monitoring Station:	CM3
Location:	Scenic Heights Block B2
Period of Baseline Noise Monitoring:	21 June 2025 – 5 July 2025
Photo of Baseline Noise Monitoring:	

Monitoring Station:	CM4
Location:	30 Rolling Hills Phase II
Period of Baseline Noise Monitoring:	21 June 2025 – 5 July 2025
Photo of Baseline Noise Monitoring:	

Monitoring Station:	CM9
Location:	285B Wing Ping Tsuen
Period of Baseline Noise Monitoring:	9 July 2025 – 26 July 2025
Photo of Baseline Noise Monitoring:	

Monitoring Station:	CM10
Location:	291 Chau Tau Tsuen
Period of Baseline Noise Monitoring:	9 July 2025 – 26 July 2025
Photo of Baseline Noise Monitoring:	

Monitoring Station:	CM11
Location:	218 Chau Tau Tsuen
Period of Baseline Noise Monitoring:	9 July 2025 – 26 July 2025
Photo of Baseline Noise Monitoring:	

Monitoring Station:	CM25
Location:	Proposed Residential Development at RSc.1.2.2
Period of Baseline Noise Monitoring:	21 June 2025 – 5 July 2025
Photo of Baseline Noise Monitoring:
